DEFENCE ESTATE · PHYSICAL TRAINING INFRASTRUCTURE

Mission-ready gyms, across every base.

A single operations platform for the UK Armed Forces' physical training estate — built to keep **every machine, every base, every audit** ready for inspection, deployment, and duty of care.

JSP 375 ALIGNED · GDPR / DPA-18 · UK-HOSTED · OFFICIAL-READY

GYMAXIS LIMITED · UNITED KINGDOM

Briefing pack · Spring 2026

Document ref. GA-MOD-2026-Q2-01
Author: Commercial Director, GymAxis

01 · WHERE MOD GYMS ARE TODAY

Most MOD gyms run on paper, WhatsApp, and trust.

Every base has a gym. Every gym has expensive kit. But the systems used to keep that kit safe — and to prove it's safe in an audit — haven't kept up with the rest of the estate.

WHAT WE HEAR FROM PTIS & ESTATES TEAMS

- **Paper check-sheets** on clipboards — easy to lose, impossible to audit, gone on handover.
- **Faults on WhatsApp** — no record of who logged what, or how long the fix took.
- **Excel asset registers** — out of date the moment someone moves base.
- **Compliance evidence scattered** across mailboxes, SharePoint, and filing cabinets.

WHY IT MATTERS TO THE MOD

- **Operational readiness gaps** — squadrons can't complete PT cycles on kit that's been broken for weeks.
- **Avoidable injury risk** — unchecked machines mean preventable claims and inquiries.
- **Wasted CAPEX** — kit binned years early because no one logged the service that would have saved it.
- **Audit fatigue** — PTIs spending duty hours chasing paper instead of training Service Personnel.

WHAT GYMAXIS IS BUILT TO DELIVER

10 sec
TO LOG A FAULT — VS MINUTES ON PAPER

5 → 1
TOOLS REPLACED (PAPER, WHATSAPP, EXCEL, EMAIL, SHAREPOINT)

100%
AUDIT TRAIL — EVERY CHECK, EVERY FAULT, EVERY FIX

3 clicks
FROM HQ ROLLUP TO A SINGLE MACHINE ON A BASE

02 · OUR PROMISE TO THE MOD

One platform. Three Services. Zero excuses.

GymAxis MOD is a purpose-built operations platform for the UK Armed Forces. It gives **DIO, Estates HQ, branch commands and on-base PTIs** one shared system of record for every piece of kit, every fault, every check-sheet, every audit — across the entire defence estate.

TIER 1 · HQ

Whole-estate rollup

DIO & service-level command see every base, every branch, every gym health score & SLA breach in one console.

TIER 2 · BRANCH

Branch oversight

RAF / Army / Navy estates teams oversee their network — provision new sites, chase compliance, sign off CAPEX.

TIER 3 · SITE

Gym-floor toolkit

PTIs & duty staff log faults in 10 seconds, run daily check-sheets, hand over shifts — from a phone on the gym floor.

03 · A DEDICATED SIGN-IN FOR HM FORCES

Service Personnel get their own front door — not a public website.

MOD users never touch the commercial sign-in. They land on a hardened portal that supports two ways in: a **shared site login** (one login per gym for the duty team) and **personal logins** for branch and estate HQ staff with two-factor security.

Two-factor security on every HQ account

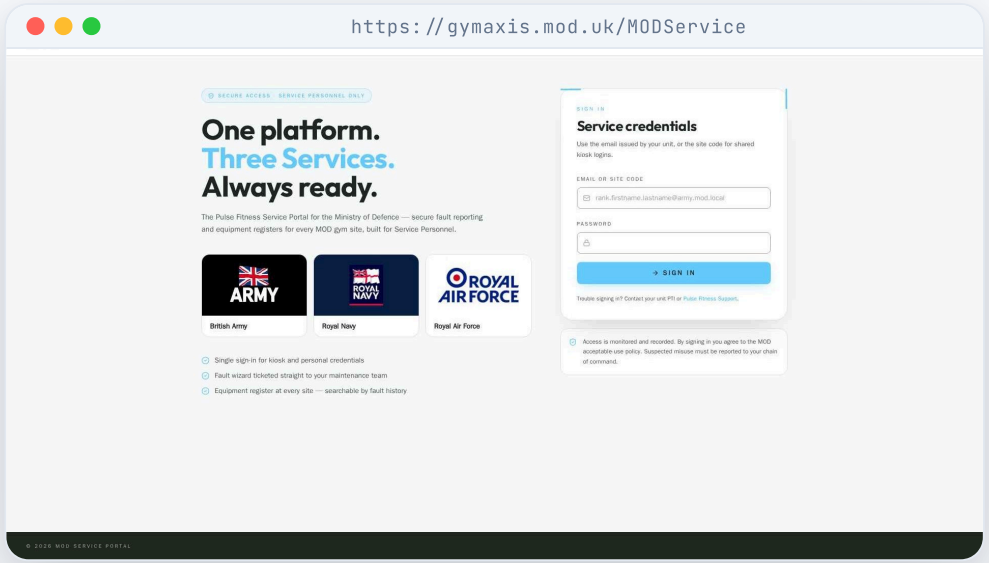

Branch & estate HQ users must enrol a two-factor code on first login. Passwords rotate every 90 days. Five wrong attempts locks the account.

Three permission levels

Site (gym-floor view), branch (RAF / Army / Navy oversight), and estate HQ (whole-of-defence). Each role sees only what it needs.

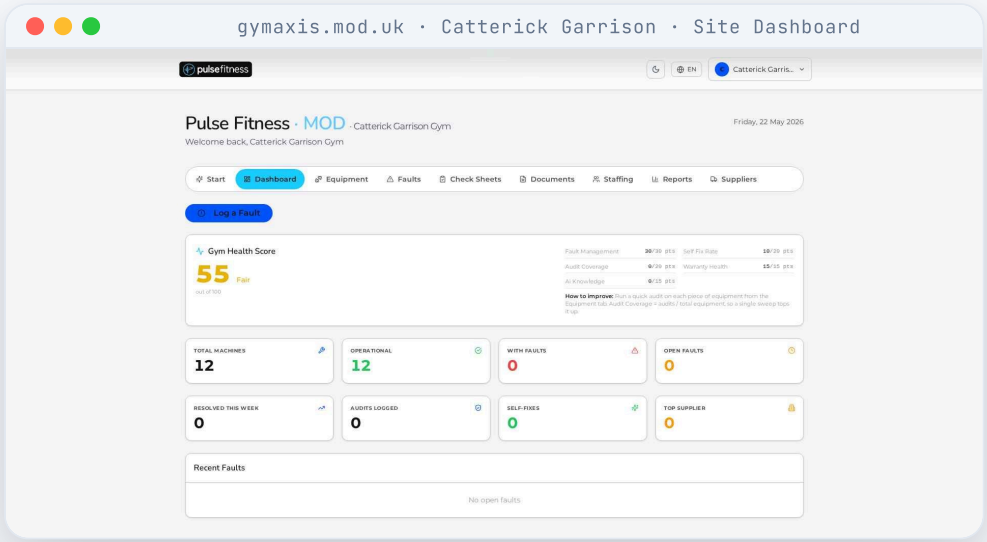

No data leaks between users

MOD users can't see commercial customers and vice-versa. Every request is checked against the user's permitted base & branch — on every click.

04 · OPERATIONAL READINESS · THE HQ ROLLUP

One glance. Every base. Every fault. Every audit.

WHAT HQ SEES

One screen, every base. Each gym appears as a card with a single health score. Click a card to drill into a branch, then a site, then a machine — in three clicks you're on a treadmill.

Gym Health Score

A single 0–100 number combining how well faults are managed, how often kit is checked, what's covered by warranty, and how much is fixed on-base.

Compare bases side-by-side

RAF Brize Norton vs Catterick Garrison vs HMS Raleigh — exact same metrics, exact same chart. No more apples-to-oranges.

Response & uptime

How long it took to acknowledge a fault, get an engineer on site, and get the machine running — every step timestamped.

CAPEX picture

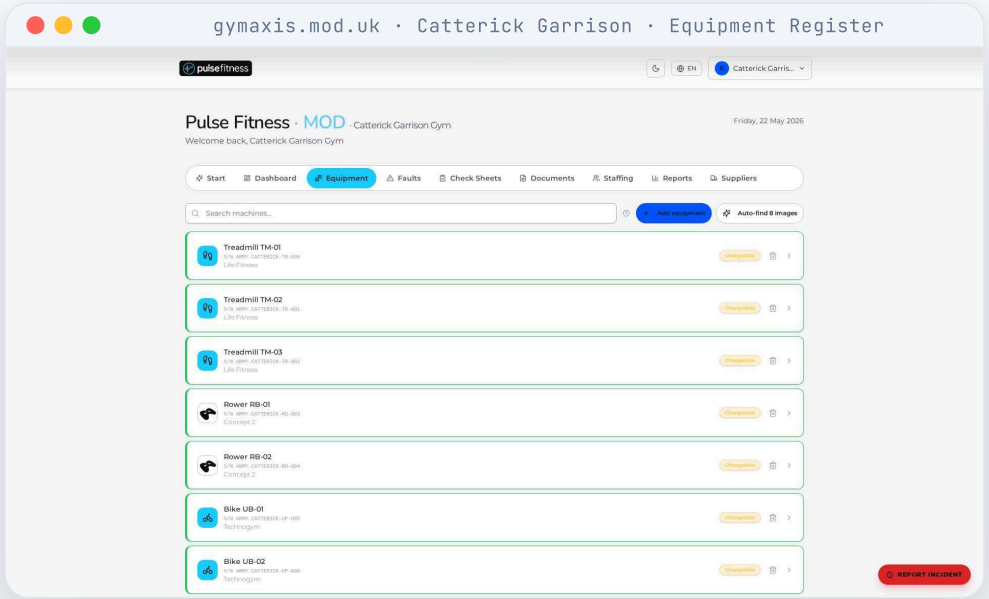

See, at a glance, how much kit is approaching end-of-life across the whole estate — so refurb vs replace decisions are evidence-led.

05 · THE SINGLE SOURCE OF TRUTH · ASSET REGISTER

Every machine, every serial, every warranty — pinned to a base.

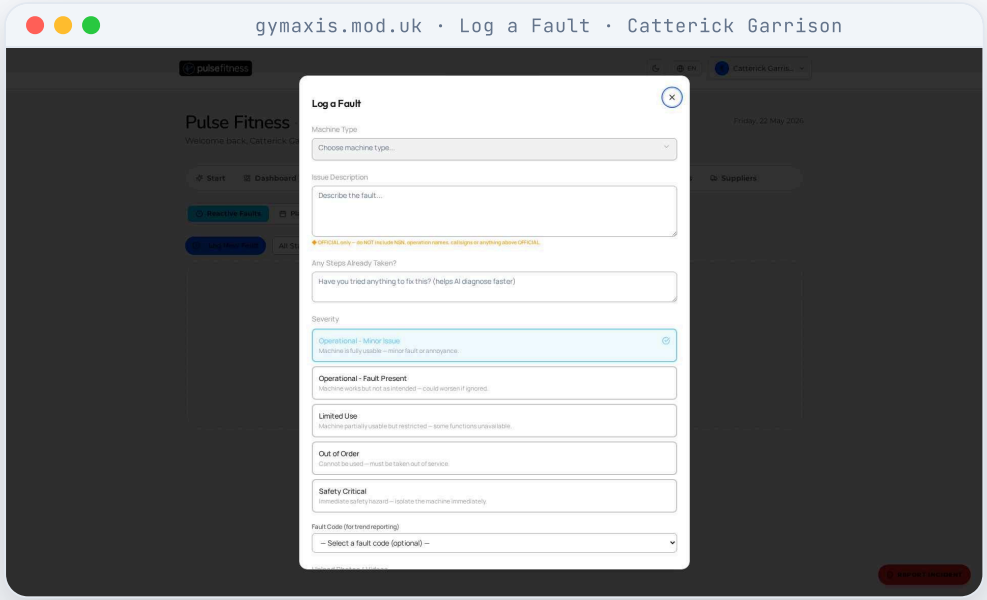

Every machine has its own record — serial number, make, model, when it was bought, when the warranty runs out, what service contract it sits under, and every fault it has ever had. **Serial numbers use the MOD's own naming convention** (`ARMY.CATTERICK-TR-000`), so existing estates records reconcile on day one.

- **QR-code labels** — print durable, gym-grade stickers from the platform. Scan to view, report a fault, or take a photo.
- **Auto-photo lookup** — if a machine doesn't have a picture, the platform fetches a verified one from the manufacturer's catalogue.
- **Warranty & service at a glance** — every machine shows a coloured pill: in warranty, expiring soon, or chargeable.
- **One-click bulk import** — drop your existing Excel asset register in and we'll turn it into live records, validated as it loads.

06 · REACTIVE FAULTS · GYM-FLOOR IN 10 SECONDS

A duty PTI logs a fault as fast as they'd send a WhatsApp.

◆ CLASSIFICATION REMINDER BUILT IN

Every text box shows a constant reminder: *"OFFICIAL only — please don't include NSNs, operation names, callsigns or anything higher than OFFICIAL."* The platform also **scans for classified patterns automatically** and flags HQ for a quick review.

- **Clear urgency levels** — five steps from "minor issue" to "safety critical — isolate immediately".
- **Photo & video** attached on the spot from a duty phone.
- **The right supplier, automatically** — Life Fitness, Technogym, Concept 2 — by make.
- **One-click escalation to HQ** when a fault sits longer than it should.
- **Group multiple machines** — five treadmills with the same fault becomes one engineer visit, not five.

07 · DAILY CHECKS · THE PAPER CLIPBOARD IS GONE

Digital check-sheets. Photo evidence. Audit-grade trail.

Every machine comes with a configurable daily checklist — by default, an MOD-tuned template (emergency-stop test, hoover underneath, foot-strap inspection, fluid levels, cable wear). PTIs run them on a tablet during the morning shift. HQ sees coverage as a live percentage.

Mapped to JSP 375

Templates line up with the MOD's own Health & Safety manual — duty-of-care evidence is built in.

RIDDOR-ready

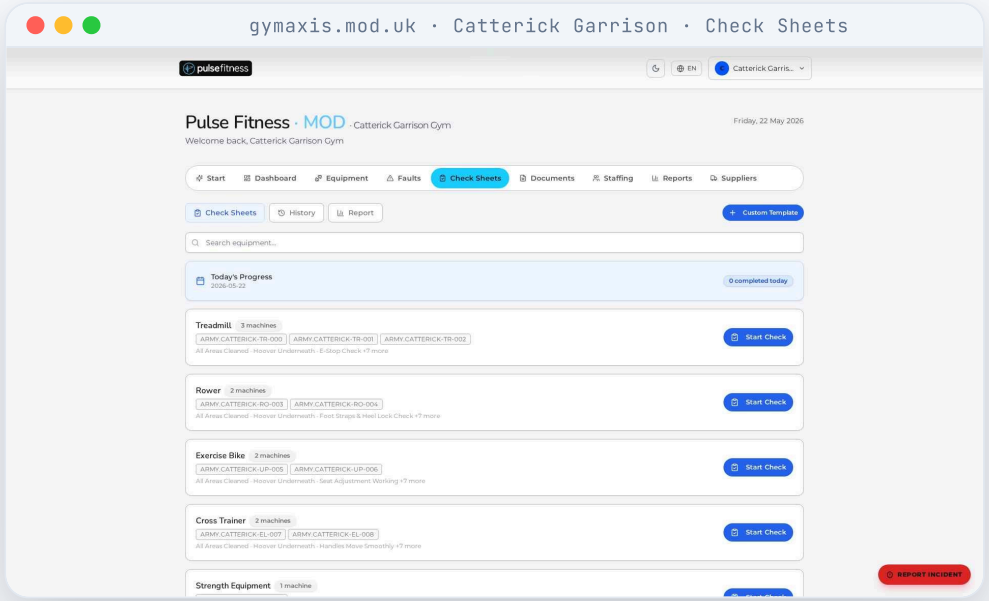

A dedicated incident wizard captures injury reports with photo, witness, and timestamp — ready for HSE if needed.

Risk assessments

Your existing Service Department risk assessment lives inside the platform, reviewed annually with reminders.

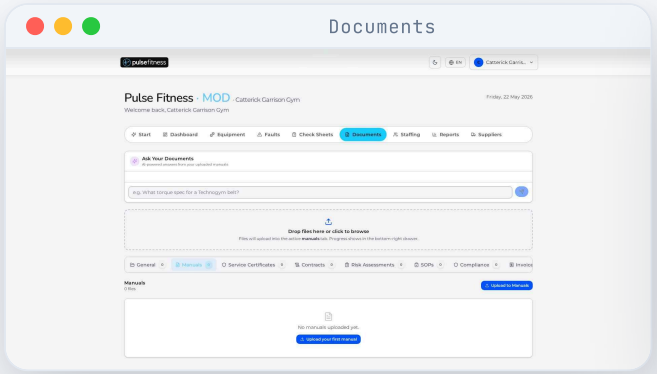

Missed checks chase themselves

Checks missed for over 48 hours nudge the duty manager; over 7 days, branch HQ is alerted automatically.

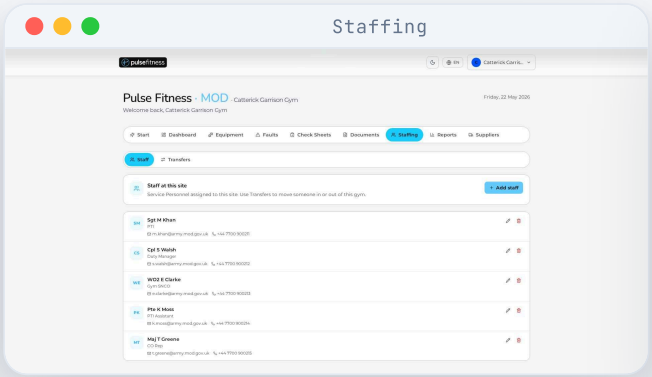

08 · THE OPERATIONAL TRIPTYCH · DOCUMENTS · STAFFING · SUPPLIERS

Everything the gym needs to run — in one place.

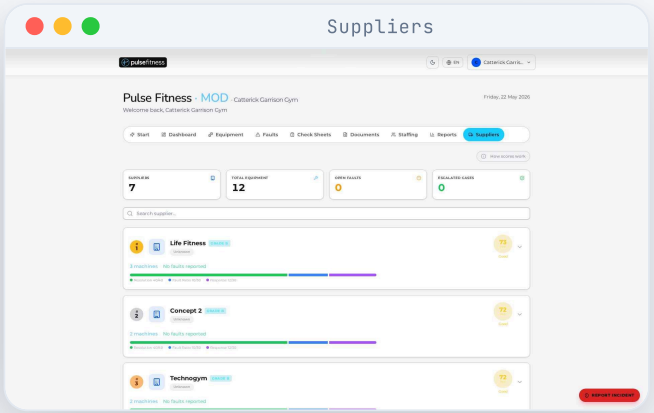

Documents

Risk assessments, service contracts, RIDDOR reports, manufacturer spec sheets — versioned, searchable, and pinned to the right machine.

Personnel & transfers

PTIs, duty managers, CO reps — with rank, role, posting-out wizard, and successor handover. Auto-archives on the leave date.

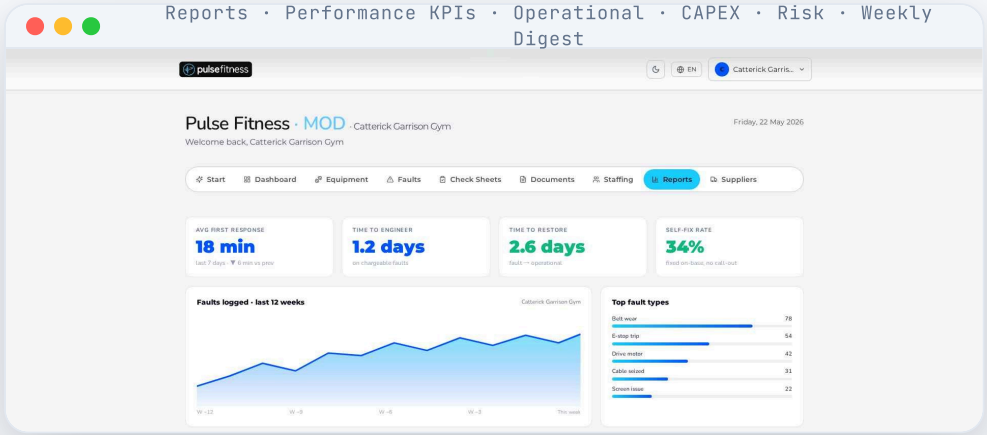

Supplier scorecards

A–F grade per supplier — graded on resolution rate, response time, and fault ratio. Procurement gets the truth, not the sales pitch.

09 · REPORTS · THE LANGUAGE PROCUREMENT SPEAKS

KPIs, CAPEX, risk — exportable, audit-defensible.

FIVE REPORT FAMILIES

Performance

How long it takes to acknowledge a fault, get an engineer on site, and get the machine running — sliced by site, branch, and Service.

Operational

Fault volumes, the faults that keep coming back, downtime hours, machines out of service — for OC PT and base SHEF briefings.

Risk assessments

A live library of risk assessments by Service and by site, with annual review reminders and version history.

CAPEX picture

Replacement costs forecast from manufacturer pricing, with refurbish-vs-replace recommendations on every machine.

Weekly digest

Emailed every Monday at 07:00 to OC PT and HQ contacts — a one-page picture of the week ahead.

10 · SECURITY · WHY THIS PASSES PROCUREMENT

Built for OFFICIAL. Hardened for HM Government.

IDENTITY

Two-factor on every HQ login

Branch & estate HQ accounts must enrol a two-factor code on first login. Short-lived sessions, single-use backup codes, and admins can't turn off their own two-factor.

SEPARATION

Your data, only your data

Every request is checked against the user's permitted base and branch. MOD data never crosses branch lines and is never mixed with the commercial customer base.

CLASSIFICATION

OFFICIAL-only guard

Every text field is scanned automatically for NSNs, callsigns, and operation names. Any hit pauses the submission and notifies HQ for a quick review.

ENCRYPTION

Encrypted end-to-end

Data is encrypted while travelling between you and us, and again at rest inside our database. Industry-standard ciphers (TLS 1.3, AES-256), with keys held in hardware-backed custody.

PASSWORDS

90-day password rotation

MOD HQ accounts are prompted to change their password every 90 days. Five wrong attempts locks the account. Passwords are stored as one-way hashes — even we can't read them.

AUDIT

Tamper-proof timeline

Every fault carries a full history — logged, escalated, assigned, fixed, closed — with a timestamp and the user who did it. Nothing can be edited after the event.

HOSTING

UK-hosted, GDPR compliant

All MOD tenant data lives in UK data centres. We support full right-to-erasure for posted-out personnel. Compliant with UK GDPR and the Data Protection Act 2018.

QUALITY

No release reaches you untested

Over 600 automated tests run before every release, plus a daily check that the live platform is healthy. If something breaks, we know before you do.

PEN-TEST

Independently tested every year

A UK-government-approved firm tries to break in once a year. Findings are fixed within 30 days and the full report is shared with your security team.

11 · THE COMPLIANCE PICTURE · WHAT WE ALREADY LINE UP WITH

Audit-defensible by design — not bolted on.

FRAMEWORK / STANDARD	STATUS	HOW GYMAXIS MOD ADDRESSES IT
JSP 375 Vol 3 Ch 5 MOD H&S management	✓ Aligned	Check-sheet templates, RA library, RIDDOR workflow, evidence retention, escalation chain all mapped to JSP 375.
JSP 440 Defence Manual of Security	✓ Aligned	OFFICIAL-only classification guard, MFA on HQ, audit trail, encrypted transport + at rest, UK hosting.
HSE / RIDDOR UK reporting of injuries	✓ Workflow	Dedicated incident wizard — photo, witness, RIDDOR-trigger flag, automatic notification to base SHEF rep.
PUWER 1998 Provision & use of work equipment	✓ Workflow	Inspection cadence enforced via PPM, fault history retained, isolated-from-use flag for unsafe kit.
NCSC Cloud Security Principles	✓ Aligned	All 14 principles addressed in the SaaS deployment doc — happy to share under NDA at procurement stage.
UK GDPR / DPA 2018	✓ Compliant	DPA & DPIA templates prepared, UK-only hosting, right-to-erasure workflow for posted-out personnel.
ISO 27001	In-flight	Pre-cert audit complete; full certification on track for Q4 2026. ISMS already operating against controls.
Cyber Essentials Plus	✓ Held	Annual renewal; audit certificate available on request.

12 · THE ROLLOUT · LOW-FRICTION, LOW-RISK

90 days from contract signature to estate-wide live.

PHASED DELIVERY

Week 0 — Contract & scoping
DPA / DPIA signed, branches identified, DIO contact set, kick-off workshop with Estates HQ.

Weeks 1–3 — Pilot (3 sites)
One site per service (RAF Brize Norton, Catterick Garrison, HMS Raleigh). Live faults, live check-sheets, real PTI users.

Weeks 4–6 — Bulk import & train-the-trainer
Existing asset registers imported via CSV. PTI champions per branch trained as in-base super-users.

Weeks 7–10 — Branch-wide rollout
RAF / Army / Navy estates onboarded in parallel waves. Daily standups with branch leads.

Weeks 11–12 — Estate-wide hand-over & QBR
DIO sign-off, full estate KPI dashboard live, first quarterly business review scheduled.

WHAT WE BRING

- **UK-based delivery team** — named project manager, named security lead, named technical lead.
- **Bulk import pipeline** — your existing Excel registers become live asset records in a single upload.
- **On-base training** — half-day workshops for PTIs, hour-long briefings for OC PT & SHEF reps.
- **Train-the-trainer kit** — printed playbooks & one-page laminated quick-reference cards.
- **Migration support** — historic fault & check-sheet data ingested where supplied.
- **Helpdesk** — UK office hours phone & email, with named escalation to engineering.
- **QBRs** — every quarter, in person at DIO if requested, on KPI delivery and feature roadmap.

13 · THE COMMERCIAL CASE · PAYS BACK IN YEAR ONE

Less downtime. Longer-lasting kit. Audit-ready every day.

10 sec
TO LOG A FAULT FROM A PHONE — VS MINUTES ON PAPER

5 → 1
TOOLS REPLACED (PAPER, WHATSAPP, EXCEL, EMAIL, SHAREPOINT)

Every day
AN AUDITABLE CHECK-SHEET FOR EVERY MACHINE, ON EVERY BASE

Day 1
YOUR EXISTING EXCEL ASSET REGISTER BECOMES LIVE RECORDS

WHERE THE MONEY COMES BACK

- **Kit lasts longer** — proper service records protect warranties and unlock refurb routes paper-based estates miss.
- **Fewer engineer call-outs** — supplier auto-routing and a self-fix knowledge base catch easy wins on base.
- **Insurance & injury claims defensible** — every check on every machine has a date, photo, and signature.
- **PTI hours recovered** — duty staff spend duty hours on Service Personnel, not on clipboards.
- **Smarter procurement** — supplier scorecards turn contract renewals into evidence-led conversations.

COMMERCIAL MODEL

One annual licence per site, banded by size, with a flat fee for HQ rollup access. All integrations, support, training, and on-base rollout included — no per-user uplift, no hidden fees. Volume tiers built around **multi-base estate commitments**.

How we share pricing

Indicative pricing at the second meeting under NDA. Full commercials delivered against an MOD scope statement, aligned with G-Cloud frameworks where the contract demands it.

14 · WHY GYMAXIS · NOT "GENERIC CAFM"

Built for gyms. Hardened for the MOD. Not the other way round.

> *"Every other system we looked at was a generic facilities tool with a 'gym' tab. GymAxis is the only one where the platform understands a treadmill, a supplier scorecard, a posted-out PTI, and an OFFICIAL classification — all at the same time."*
>
> — Indicative reference, UK Pulse Pro pilot site

Domain-built, not generic

Equipment, fault codes, severity tiers, supplier grading, PPM cadence — modelled for fitness kit, not retrofitted from a CAFM.

UK company, UK hosted

British company. UK-only data centres. UK-based delivery and support team. No offshoring of MOD data, ever.

Already running in the wild

Live with commercial multi-site operators (Third Space, Pulse Fitness estate). MOD-tier features battle-tested in dev against Catterick Garrison demo data.

Quarterly roadmap input

DIO & PT branch leads sit on the GymAxis MOD steering group — your priorities become next quarter's roadmap.

Exit-friendly

Your data is yours. Full CSV / JSON export of every asset, fault, check-sheet, and document — no lock-in tax. Always.

Ambitious, but not reckless

624-test regression suite, zero-warning lint gate, post-deploy smoke checks, weekly lint-health digest — engineering discipline you can audit.

15 · NEXT STEPS

Let's make PT readiness a measurable thing.

We'd welcome a 60-minute working session with the DIO team and a nominated branch lead to walk through a live MOD tenant, demo the fault flow on a real base, and scope a 3-site pilot.

STEP 1

Working session

60 mins · DIO team + branch lead
Live MOD tenant walkthrough.

STEP 2

Security review

DPA & DPIA pack
NCSC cloud principles mapped.

STEP 3

3-site pilot

One per service · 90 days
Commercial terms post-pilot.
