SICON SAGE 200 WEBAPI · ACCESS REQUEST

What we need to connect GymAxis to the Pulse Fitness Test environment.

A short, specific brief for Pulse Fitness's Sicon / Sage 200 administrator. Read time: 90 seconds. Action required: create one read-only API user and confirm three details.

§1 THE ASK, IN ONE SENTENCE

Please create a **dedicated, read-only Sicon WebAPI user** against the **Pulse Fitness Test** company on `service.pulsefitness.com`, with access to the **Service Case** and **Service Appointment** endpoints. GymAxis will use these credentials only to read fault & engineer-job data into our maintenance platform — no writes to your live Sage 200 environment, ever, until we both sign off on a UAT plan.

§2 EXACTLY WHAT TO CREATE IN SAGE

In Sage 200 → *Sicon WebAPI* → *Maintain WebAPI Users*, create:

WebAPI username	`gymaxis-readonly`
Password	Generated by you · sent to GymAxis via a password-manager share link or password-protected PDF (not plain email).
Company	`Pulse Fitness Test`
Authentication scheme	HTTP Basic (per Sicon WebAPI standard)
Account state	Enabled · password set to *never expire* for the duration of integration testing (we'll rotate together at go-live)

§3 PERMISSIONS — LEAST-PRIVILEGE SCOPE

Only these endpoints are required. Everything else can stay locked down.

ENDPOINT	METHODS	WHY WE NEED IT
`/api/SMConnectivity/Ping`	GET	Health check — we hit this every 60 s.
`/api/service/cases & /api/service/cases/{id}`	GET	Read existing service cases & their detail.
`/api/service/case-types · case-tracking-statuses · priorities`	GET	Pull dropdown lists so GymAxis maps to Sicon's exact values.
`/api/service/trackingnotes/{id}`	GET	Read engineer progress notes on a case.
`/api/service/appointments & /api/service/appointments/{id}`	GET	Read engineer visits / time bookings.
`/api/service/appointments/resources`	GET	List engineers, vans, sub-contractors.

*Note: at this stage we are **not** requesting any POST/PUT/DELETE access. When we're ready to write back to Sicon (engineer notes, time-bookings), we'll submit a second, narrower request for those specific endpoints only.*

gymaxis.ai · mod@gymaxis.ai

§4 WHAT WE DO *NOT* NEED (REASSURANCE)

To keep the scope as small as possible, we are explicitly **not** requesting:

- Access to your **Live** Sage 200 company — Test only at this stage.
- Access to **Finance** ledgers (Sales/Purchase/Nominal/Cashbook) — out of scope.
- Access to **Stock**, **Manufacturing**, **SFDC** mobile endpoints — these are factory-floor controllers, not relevant to gym maintenance.
- Any **write** access during the initial integration window — read-only only.
- Any of your **customer or supplier personal data** beyond what's already in service cases — we don't pull master records.

§5 THREE DETAILS TO CONFIRM WITH THE USER/PASSWORD

Company ID	The numeric `companyID` for "Pulse Fitness Test" (usually 1–10).
IP allowlist	If the WebAPI is IP-restricted, please add GymAxis production egress IPs (we'll send under separate cover when you confirm).
Rate limits	Any per-user request-rate cap we should respect (we'll default to ≤ 2 requests/second per controller if unspecified).

§6 OUR SECURITY COMMITMENTS TO PULSE

CREDENTIAL STORAGE
Stored encrypted at rest in a UK-hosted secrets vault. Never logged, never appears in error reports.

TRANSPORT
TLS 1.3 only. We pin the Sicon hostname & reject downgraded connections.

AUDIT TRAIL
Every Sicon call is logged with timestamp, endpoint, status, and the GymAxis operator who triggered it. We'll share the log on request.

ROTATION
We'll rotate this credential **jointly** at the end of integration testing, and at any cadence Pulse requires thereafter.

BREACH RESPONSE
If we suspect the credential is compromised, we notify Pulse IT inside 4 hours and stop using it.

DATA RESIDENCY
Any data fetched from Sicon stays inside the GymAxis UK tenant boundary — no offshoring, no third-party processors.

§7 PASTE-READY EMAIL FOR PULSE'S SICON ADMIN

PASTE-READY · forward this to your Sicon admin

```
Hi {admin first name}, could you create a Sicon WebAPI user for GymAxis on the Pulse Fitness Test
company please?

  Username gymaxis-readonly · Company Pulse Fitness Test · Auth HTTP Basic · Permissions read-only on
Service Case + Service Appointment controllers only (see PDF §3).

Could you also confirm the numeric companyID for Pulse Fitness Test, plus any IP allowlist / rate limit
we need to honour? Send the password via 1Password / LastPass / Bitwarden share (not plain email).

Thanks, {your name}
```

§8 SEND THE CREDENTIALS TO

integrations@gymaxis.ai · security: security@gymaxis.ai · **password-manager share only.**

Thank you.
