pulsefitness

THE CONNECTED OPERATIONS PLATFORM

Fitness facilities, equipment and service teams — in one place.

Bring equipment, faults, assets, suppliers, staff, reporting and service history together in a single connected portal.

pulsefitness.ai Built by fitness equipment and service specialists

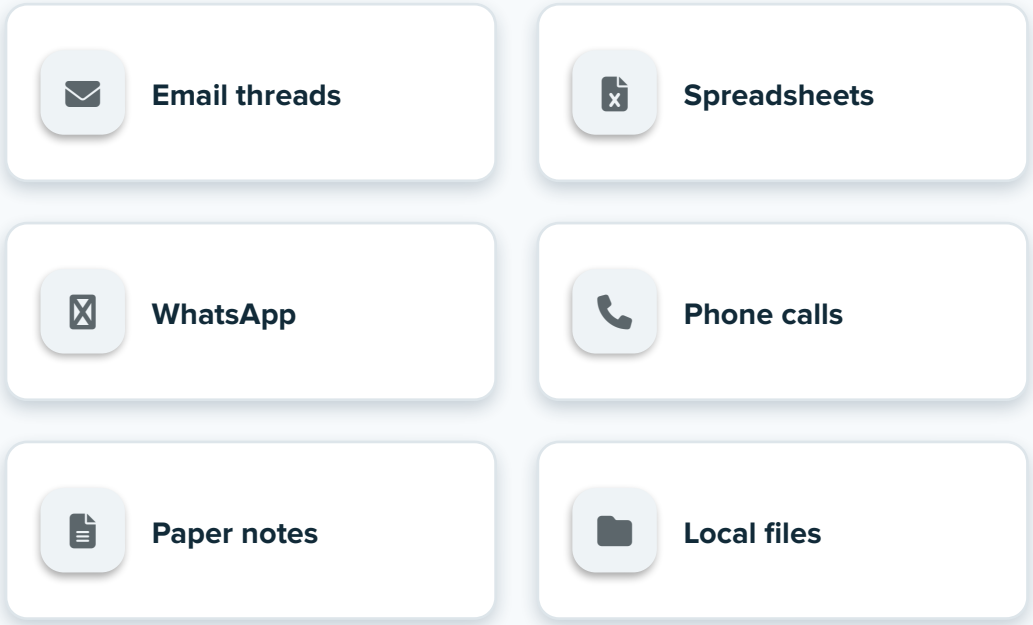

THE CHALLENGE

Too much runs through disconnected tools

Equipment, faults and service history are spread across inboxes, spreadsheets and messages — so nothing is truly visible.

When information lives in separate places, jobs get missed, response times slip, and it becomes hard to prove what happened to a machine and when.

- **No single record** — history is scattered across people and systems
- **Slow fault handling** — logged by phone or message, easily lost
- **Weak reporting** — downtime and repeat faults are hard to evidence
- **No audit trail** — limited visibility for managers and stakeholders

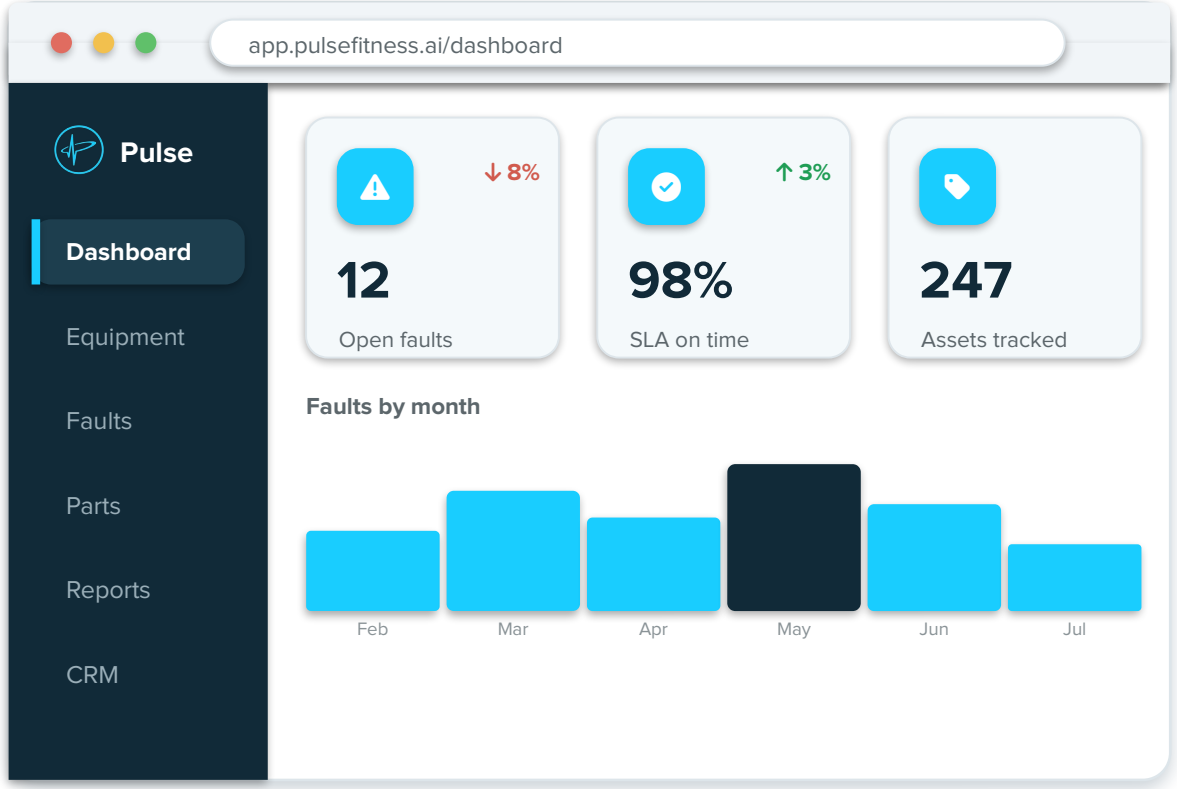

THE PLATFORM

One connected portal for the whole operation

Pulsefitness.ai joins equipment, faults, suppliers, engineers, stock and reporting so every team works from the same information.

- **Everything linked** — faults, parts and reports sit against the right machine
- **Live visibility** — see status across one site or your whole estate
- **Shared with your team** — staff, engineers and suppliers stay aligned
- **Full history** — every action recorded and easy to retrieve

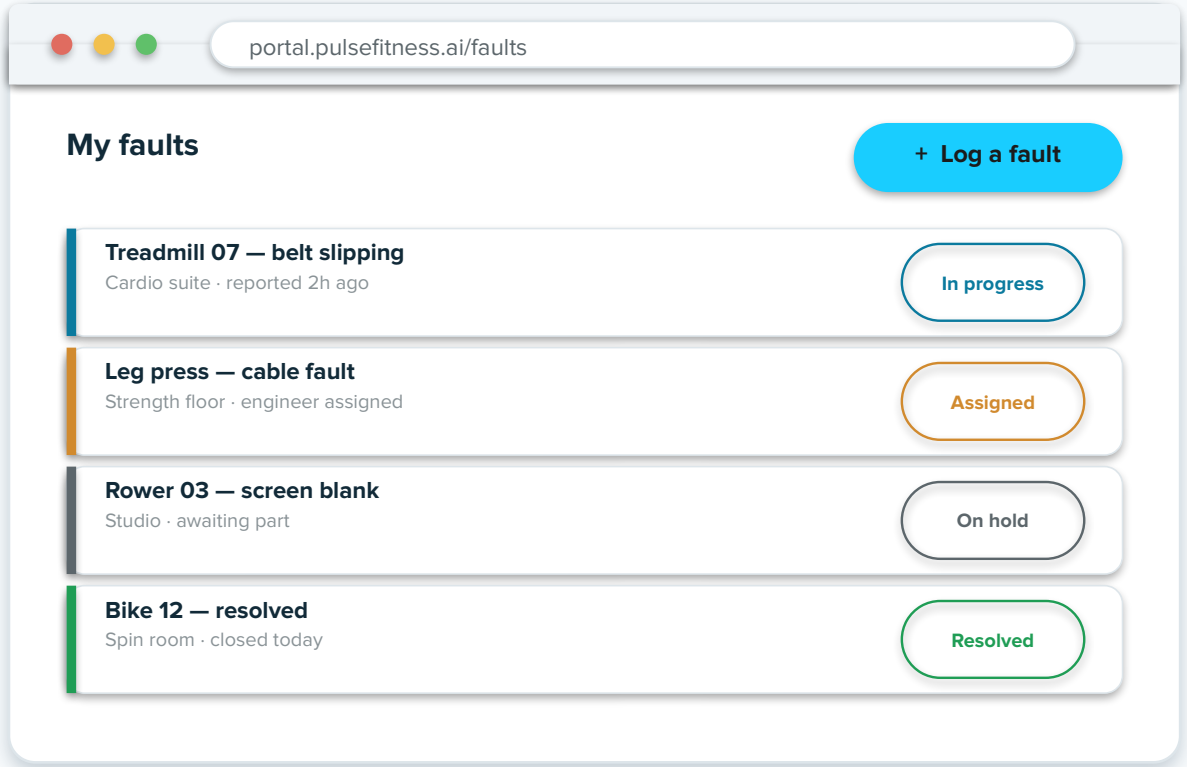

CUSTOMER PORTAL

A clear front door for your facility

Your team logs faults, tracks progress and manages equipment without chasing emails or calls.

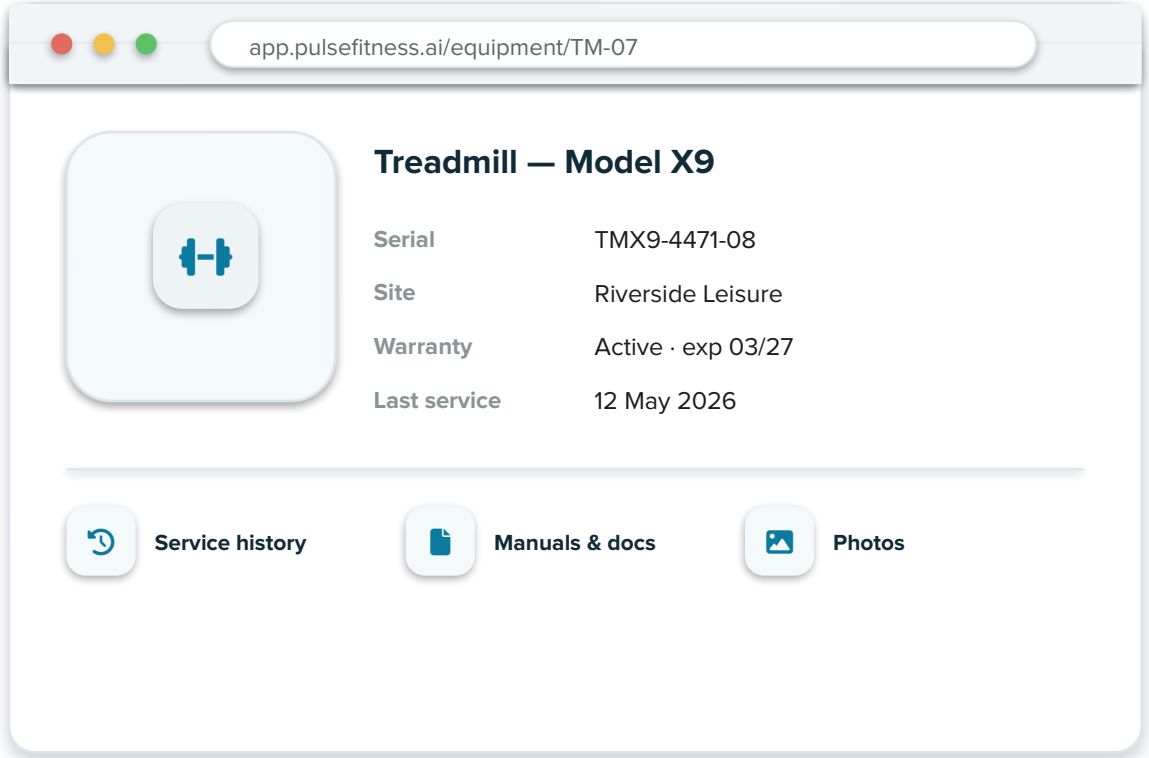

- **Log faults in seconds** against the correct machine, with photos and video
- **Track every update** from report through to resolution
- **Request parts** directly against equipment when needed
- **View equipment history** service records, documents and warranty
- **Upload evidence** images and clips that help engineers arrive prepared

ASSET MANAGEMENT

Every machine has a complete record

One reliable source of truth for each item of equipment across all of your sites.

Make, model & serial

Every machine identified precisely across the estate.

Site & location

Know exactly where each item lives, room by room.

Warranty & cover

Warranty dates and contract cover at a glance.

Service history

Every visit, fault and part recorded on the asset.

Manuals & documents

Guides, certificates and files kept in one place.

Images

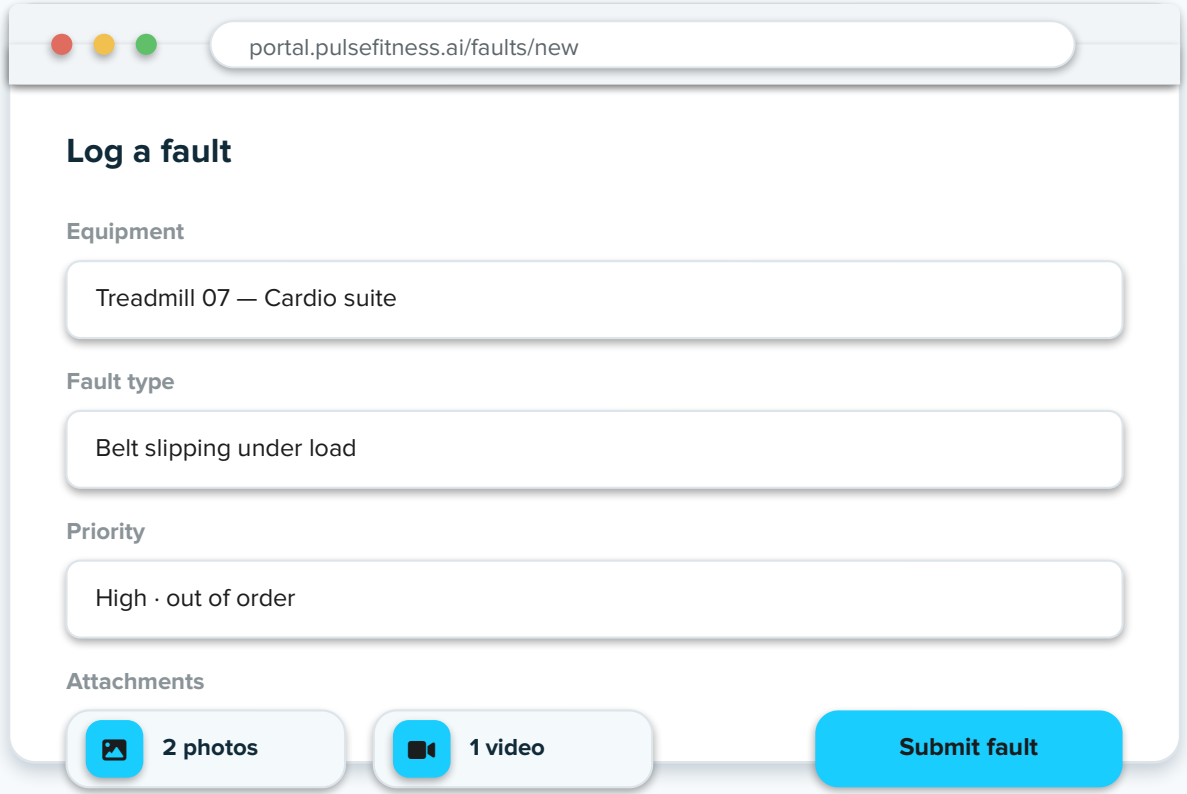

Reference photos to support faults and identification.

FAULT LOGGING

Report faults against the right machine

Structured fault capture means engineers arrive informed and nothing gets lost in translation.

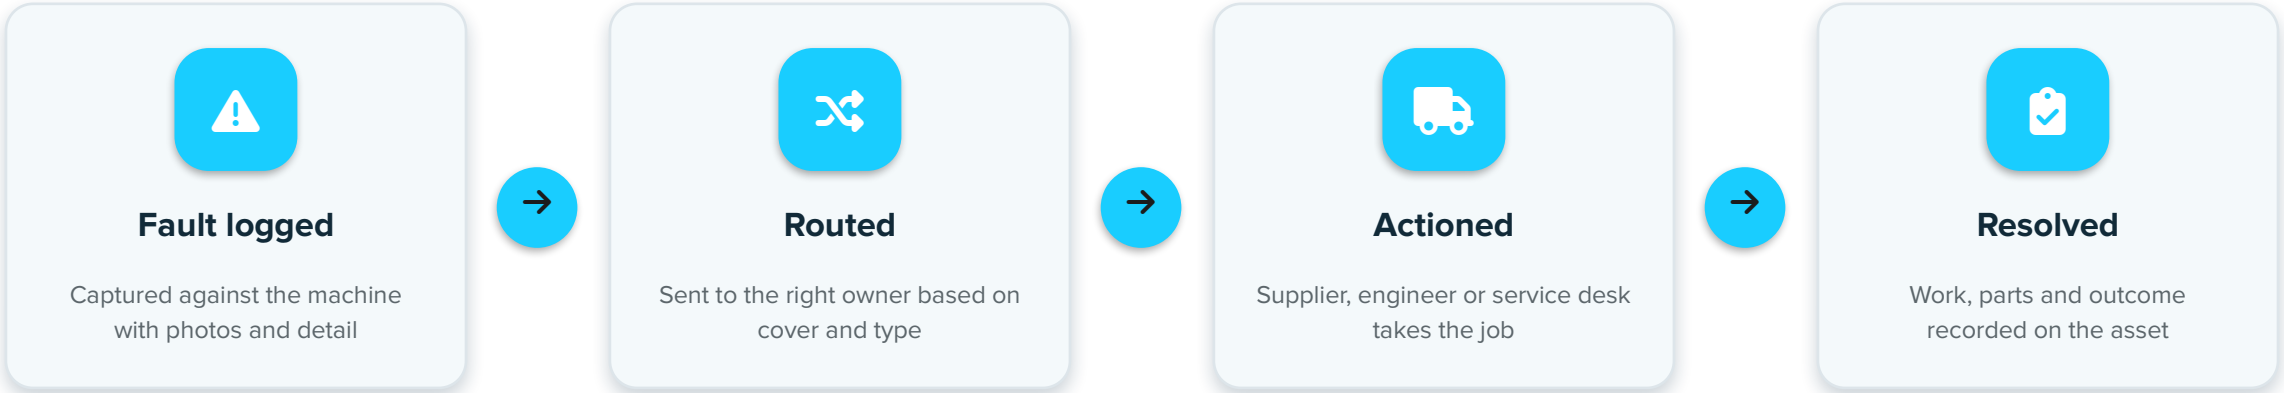

- **Linked to equipment** every fault sits against the correct asset and site
- **Photos & video** attach evidence so the issue is understood up front
- **Priority & severity** flag out-of-order machines and urgent safety issues
- **Notes & contact** capture context and the right person to reach
- **Status you can follow** a clear trail from reported to resolved

SUPPLIER & SERVICE DESK FLOW

Faults reach the right team, first time

Every fault is routed with a structured job card — to a supplier, an engineer or your internal service desk.

Structured supplier job card

Site · equipment · serial number · fault detail · photos · contact — everything a supplier or engineer needs, sent in one clear, consistent card.

REQUEST PARTS

Order the right part against the right machine

Part requests are tied to the exact asset, with drawings and photos to remove guesswork.

Against the machine

Requests are linked to a specific asset and serial number.

Exploded drawings

Select the correct part from diagrams where available.

Photo support

Upload images to confirm the component needed.

Warranty visibility

See cover status before a request is submitted.

Straight to Pulse

Requests are sent directly to the Pulse Fitness team.

Tracked history

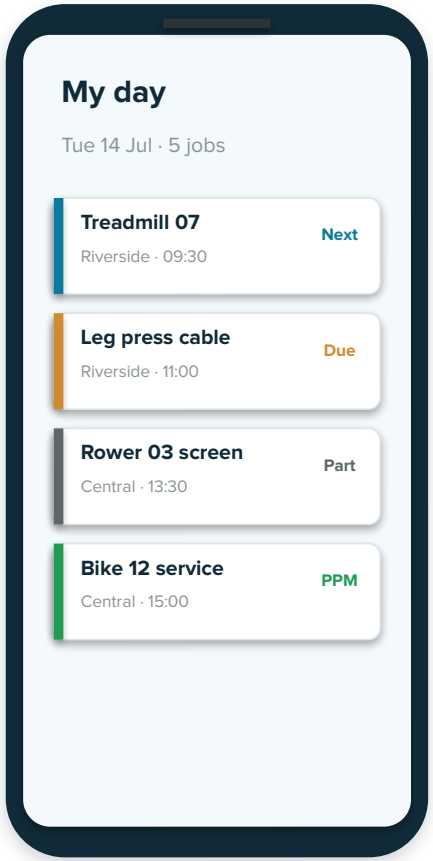

Every request recorded against the equipment record.

ENGINEER APP

Everything the engineer needs, on site

Jobs, history, parts and manuals in one app — updated from mobile or desktop.

- **Today's jobs** a clear, ordered view of what's due and where
- **Full asset history** past faults, services and notes before arrival
- **Photos, notes & parts** record work and components used on the job
- **Manuals & documents** reference guides available at the machine
- **Route & site detail** location, access and contact information
- **Update anywhere** complete work from the field or the office

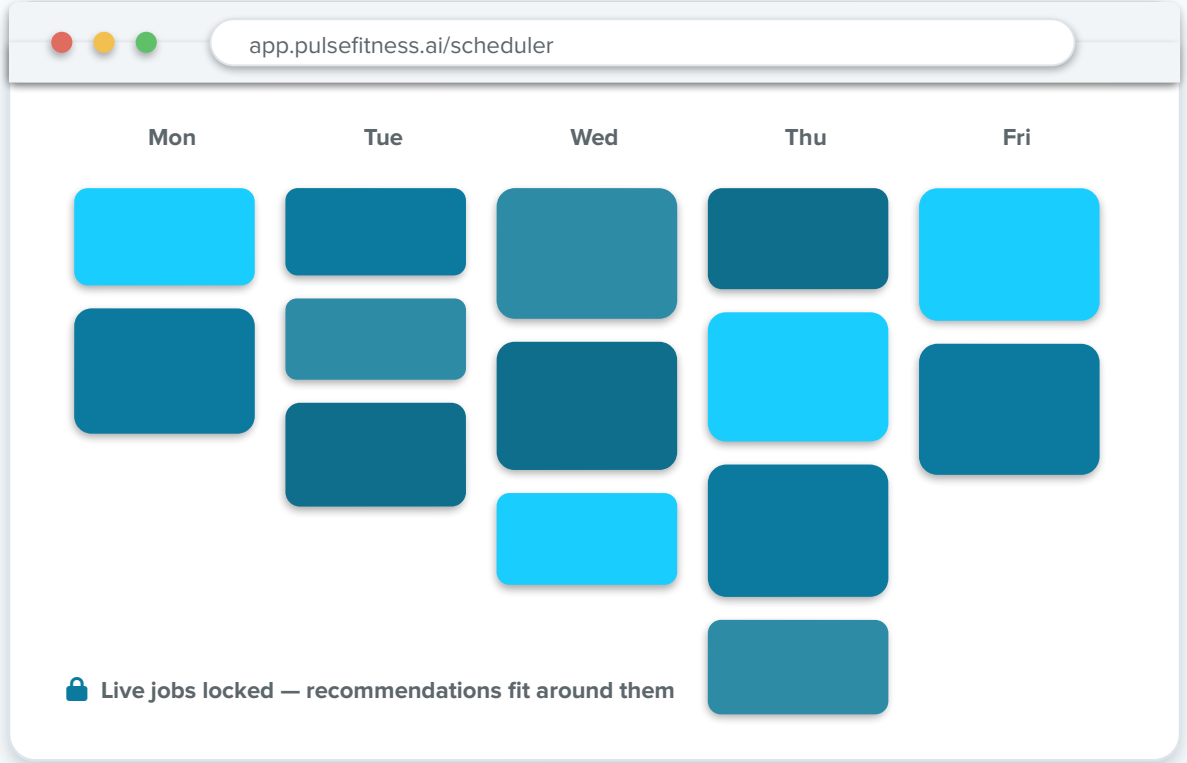

SCHEDULING

Smarter planning, with planners in control

Optimise engineer schedules while protecting live jobs, SLAs and the plans your team has already made.

- **Protect live jobs** in-progress and committed work is never disrupted
- **Reduce travel** group nearby jobs to save time and mileage
- **Protect SLAs** prioritise work against agreed response times
- **Balance the day** sensible workloads across the team
- **You stay in control** recommendations to accept, adjust or override

STOCK & PARTS CONTROL

Full visibility of parts, everywhere

From van stock to remote stores — manage what you hold, what's used and what to reorder.

Parts catalogue

A clean, consistent record of every part and code.

Van stock

See what each engineer is carrying in the field.

Customer requests

Handle part requests raised from the customer portal.

Dealer & remote stores

Track stock held across dealers and store locations.

Usage & replenishment

Monitor consumption and trigger sensible reordering.

Global failure trends

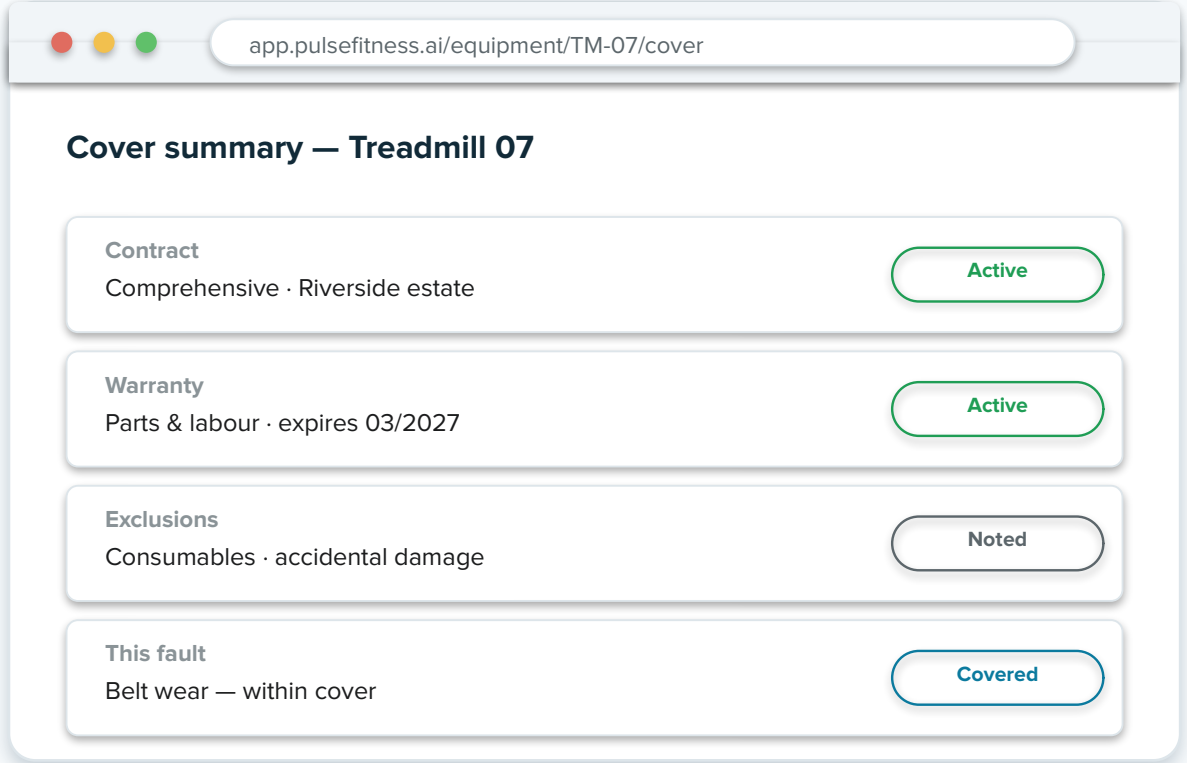

Spot parts that fail often and plan ahead.

CONTRACTS & WARRANTY

Cover and chargeability, made clear

See exactly what's covered before work begins — no ambiguity over who pays.

- **Contract type** the agreement in place for each site and asset
- **Warranty status** active cover and expiry dates at a glance
- **Exclusions** what falls outside cover, clearly shown
- **Cover levels** the scope of service tied to each machine
- **Chargeable decisions** confident, evidenced calls on billing

CAPEX REPORTING

Build the evidence for replacement

Turn service history into a clear, defensible case for repairing or replacing ageing equipment.

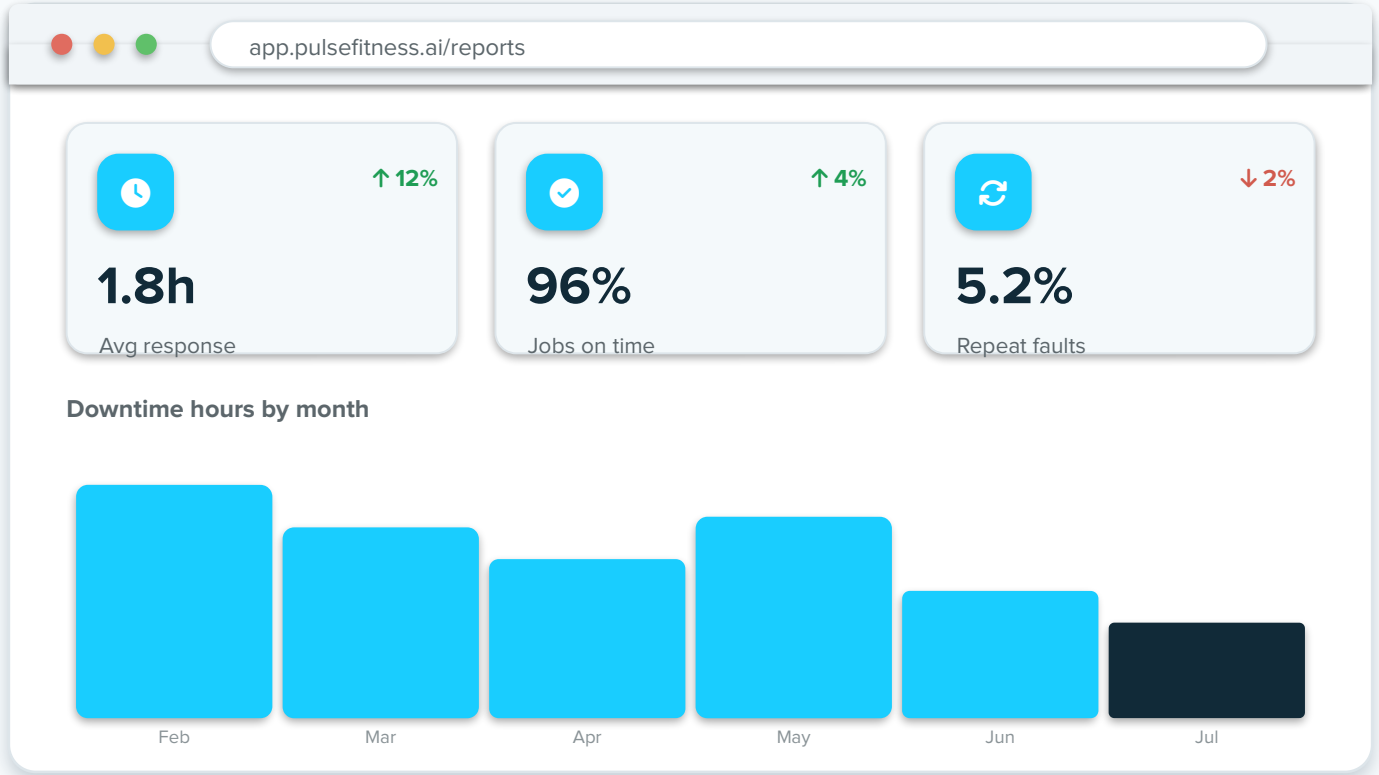

- **Age & condition** identify equipment nearing end of life
- **Fault frequency** surface machines that break down repeatedly
- **Downtime** quantify time out of service and its impact
- **Cost to serve** see the true running cost of each asset
- **Replacement evidence** a clear case for capital investment

REPORTS & DASHBOARDS

The numbers that run your operation

Operational reporting across faults, response, downtime, engineers and asset condition.

- **Faults & repeat issues**
- **Response & resolution times**
- **Engineer activity**
- **Asset condition**
- **Service performance**

SAFETY & COMPLIANCE

Evidence you can stand behind

Capture safety events and compliance records with a complete, time-stamped audit trail.

Accident reports

Record incidents with the detail you need on file.

RIDDOR reports

Support reportable incident requirements clearly.

Risk assessments

Document and store assessments against sites and tasks.

Check sheets

Routine safety checks recorded and easy to review.

Audit trail

Every entry and change logged and traceable.

Evidence storage

Files and records kept together and retrievable.

STAFFING & OPERATIONS

Keep the day-to-day joined up

Bring people, tasks and communication into the same platform as your equipment and service.

Staff records

Hold people, roles and details in one place.

Communication

Keep messages and updates alongside the work.

Org charts

See structure and responsibilities at a glance.

Expenses

Capture and track operational spend.

Site tasks

Assign and follow up on day-to-day jobs.

Operational visibility

A clear view across sites and teams.

CRM & CORPORATE

Manage relationships and growth

A built-in CRM connects your commercial activity to the equipment and service that underpins it.

Companies & contacts

Organised customer and contact records.

Sites

Every site linked to its equipment and history.

Opportunities

Track pipeline from enquiry to won.

Quotes

Create and manage branded quotations.

Contracts

Hold agreements against companies and sites.

Campaigns

Run and record marketing and comms activity.

Pre-install surveys

Structured site surveys before installation.

Communication history

A full record of contact over time.

ONBOARDING

Add your equipment quickly — two ways

Import by spreadsheet, or simply photograph a machine and let Pulse extract the detail for review.

01

Upload

Add equipment by spreadsheet, or take a photo of the machine and data plate.

02

Extract

Pulse reads make, model and serial number and drafts the asset record.

03

Review & confirm

Your team checks the detail and approves it into the register.

Nothing is added automatically. AI drafts the record; your team always reviews and confirms before it enters the register.

AI SUPPORT

Practical help, not gimmicks

AI assists your team with the routine, while people stay firmly in control of every decision.

Summaries

Condense long histories into a quick, clear picture.

Triage

Suggest likely causes and next steps for a fault.

Reports

Help draft clear, consistent operational reports.

Scheduling suggestions

Recommend sensible plans that protect live jobs.

CAPEX evidence

Assemble the case for repair or replacement.

Onboarding checks

Read data plates and pre-fill records for review.

WHY PULSEFITNESS.AI

Built for real operational problems

Not another disconnected tool — a platform shaped by people who service fitness equipment for a living.

One connected platform

Equipment, faults, parts, service and reporting in a single, joined-up system.

Built by specialists

Designed by fitness equipment and service experts who know the work.

Designed for the day-to-day

Focused on the practical problems facilities face, every single day.

WHO IT'S FOR

Built for the whole sector

From a single independent gym to national multi-site operators and their service partners.

- Commercial gyms
- Multi-site operators
- Leisure trusts
- Councils
- Universities
- Hotels
- Studios
- Suppliers & service teams
