pulsefitness

MOD SERVICE PORTAL

A secure service and equipment portal for MOD fitness and rehabilitation environments.

Structured, auditable management of physical training equipment (PTE) — supporting uptime, safety, service delivery and long-term asset planning.

THE REQUIREMENT

Clear visibility across MOD fitness estates

Sites need dependable oversight of equipment, faults, safety events and service — with evidence that stands up to scrutiny.

Physical training and rehabilitation depend on equipment being safe, available and properly maintained. Without a single, auditable record, that assurance is hard to demonstrate.

- ✓ **Equipment & PTE status** know what's in service and what isn't
- ✓ **Faults & downtime** logged, tracked and evidenced
- ✓ **Safety events** captured against equipment and site
- ✓ **Replacement evidence** a defensible basis for investment

Site visibility

Fault & downtime

Replacement case

PORTAL OVERVIEW

One secure place for authorised site users

The MOD Service Portal brings equipment, faults, service updates and reporting into a single, permission-controlled system.

- **Equipment & faults** managed against every item of PTE
- **Service updates** clear status from report to resolution
- **Safety & reporting** ASER, compliance and service evidence
- **Permission-controlled** users see only what they should

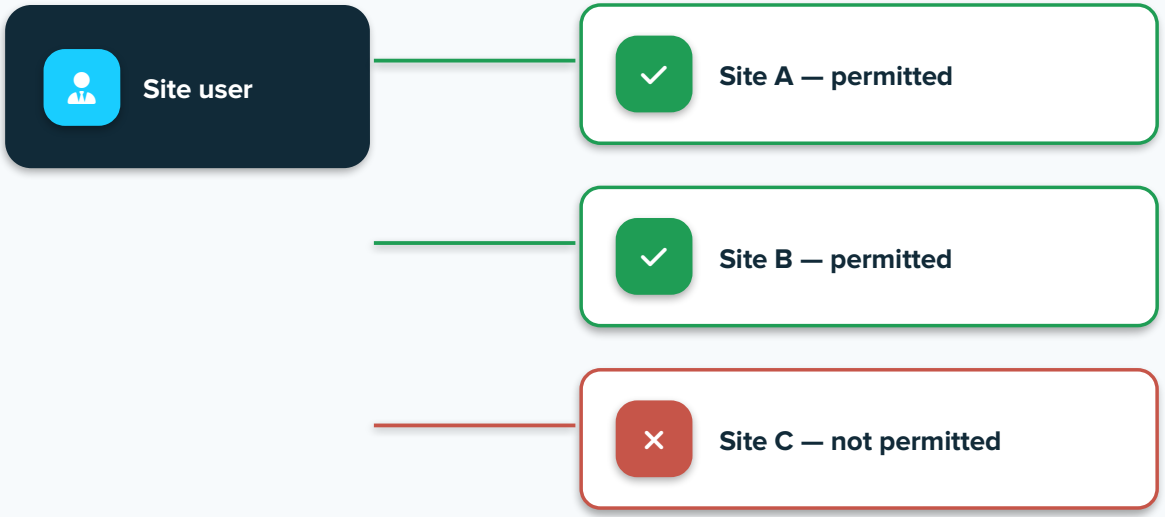

SITE-BASED ACCESS

Users see only their permitted sites

Access is scoped to the sites a user is authorised for — nothing more.

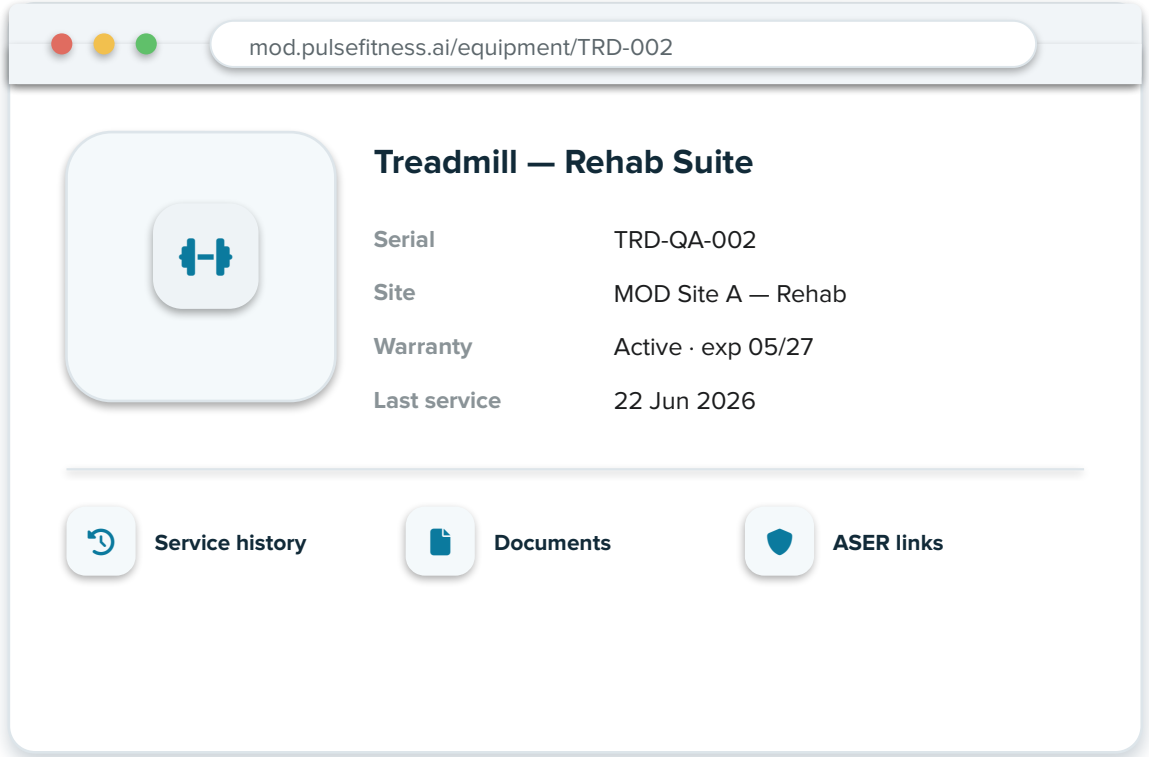

- **Scoped by site** equipment, faults and reports are site-restricted
- **Single or multiple sites** managers can be granted several locations
- **No cross-site visibility** data does not leak between sites
- **Central oversight** Pulse Fitness supports across the estate as needed

EQUIPMENT REGISTER

A complete record for every item of PTE

One reliable, auditable record per machine — the foundation for service, safety and planning.

Make, model & serial

Each item of PTE identified precisely.

Site & location

Where the equipment is held and used.

Warranty & cover

Cover status and expiry, clearly shown.

Service history

Every visit and fault against the item.

Images & documents

Photos, manuals and certificates on file.

Linked safety events

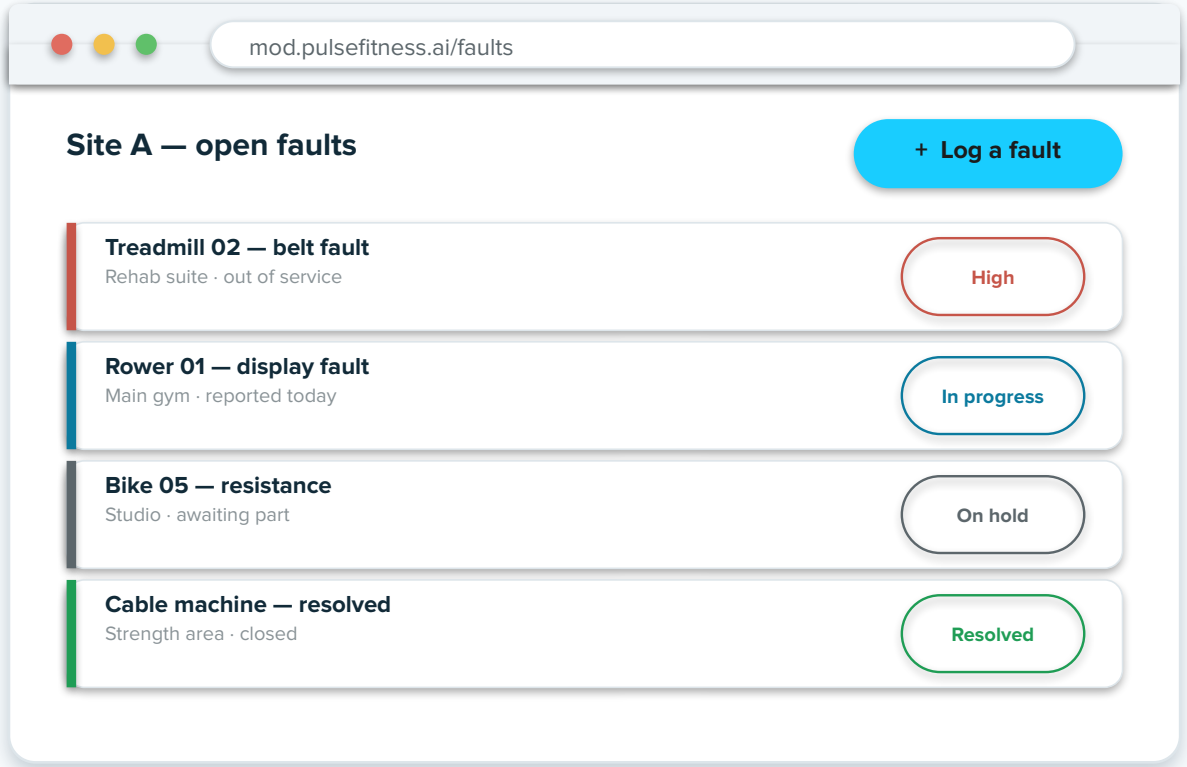

ASER entries connected to the asset.

FAULT LOGGING

Report faults against the right equipment

Authorised users log faults directly against PTE, attach evidence and follow progress.

- **Linked to equipment** faults sit against the correct item and site
- **Evidence attached** photos and detail so the issue is understood
- **Priority & status** flag out-of-service equipment and urgency
- **Progress tracked** a clear trail from report to resolution
- **Audit-ready** every fault and change is recorded

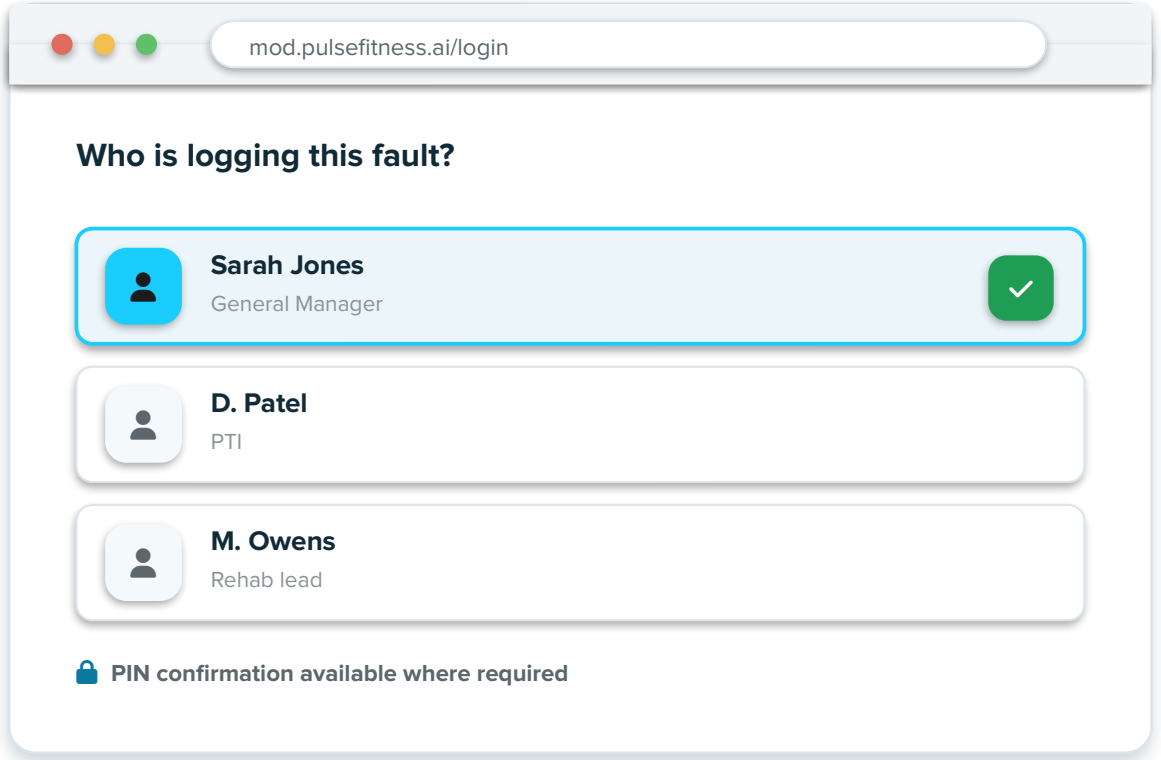

SHARED SITE LOGIN & STAFF SELECTION

Shared access, individual accountability

Where a shared login is appropriate, the portal still captures the individual staff member raising each fault.

- **Shared site access** one login for a site where that suits operations
- **Named on every action** the individual staff member is still recorded
- **Optional PIN** confirm the person behind a shared session
- **Clear accountability** who logged what, and when, is never lost

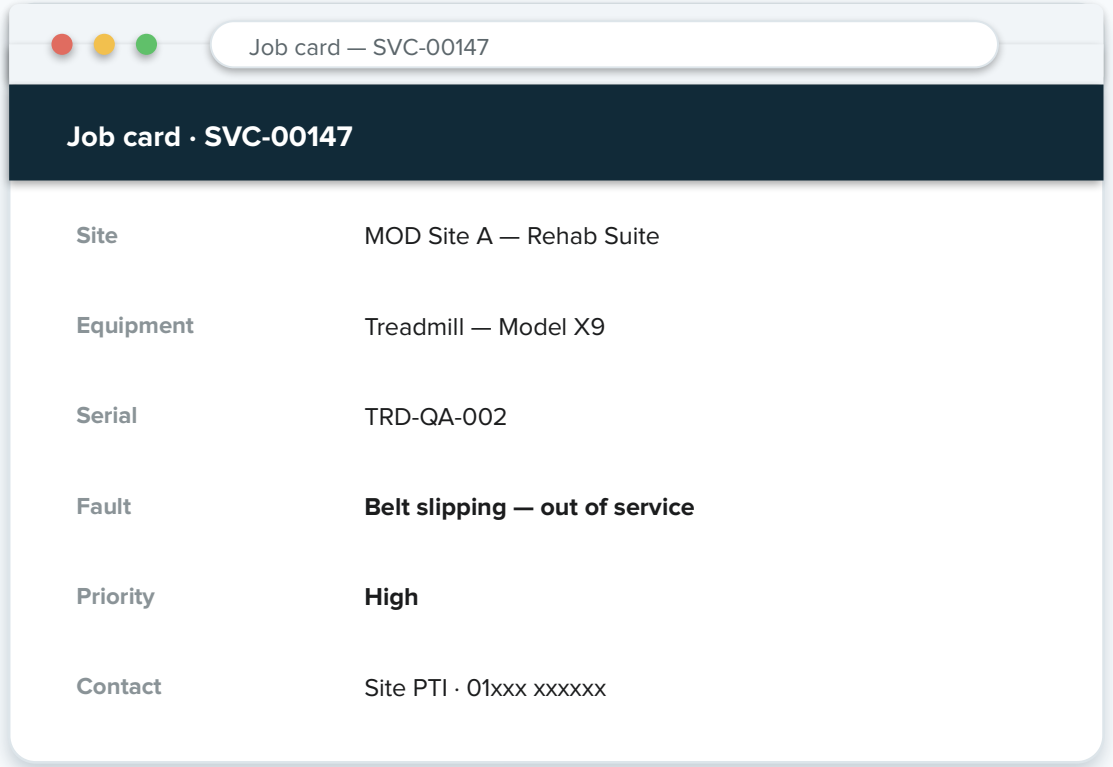

SUPPLIER & SERVICE DESK CARDS

Structured job cards to Pulse Fitness

Faults are sent to Pulse Fitness as consistent, complete job cards — nothing important is left out.

- **Site**
- **Equipment**
- **Serial number**
- **Fault detail**
- **Photos & evidence**
- **Contact information**

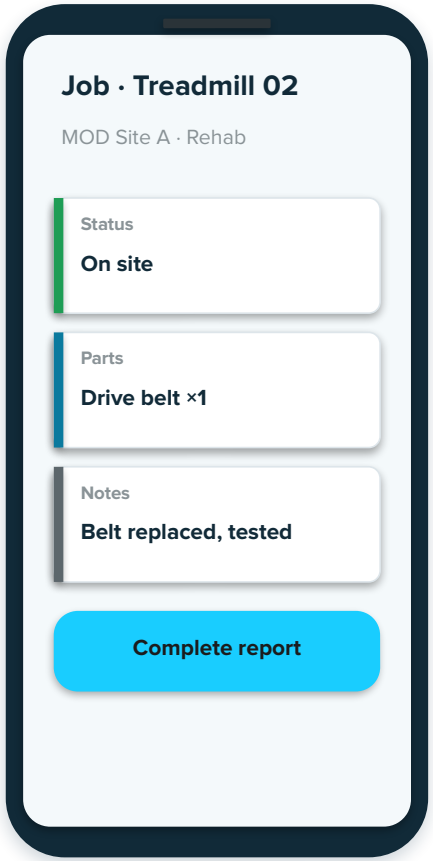

ENGINEER UPDATES

Work recorded from the field

Engineers update status, add notes, record parts and complete reports from the Engineer App.

- **Status updates** keep the site informed as work progresses
- **Notes & findings** capture what was done and what was found
- **Photos** before-and-after evidence on the job
- **Parts used** components recorded against the equipment
- **Completed reports** a clear service record on every visit

REQUEST PARTS

Order the right part against the right PTE

Part requests are tied to the exact item of equipment, with drawings and photos to remove guesswork.

Against the machine

Requests linked to a specific item and serial number.

Exploded drawings

Select the correct part from diagrams where available.

Photo support

Upload images to confirm the component needed.

Cover visibility

See warranty and cover before requesting.

Straight to Pulse

Requests routed directly to the Pulse Fitness team.

Recorded history

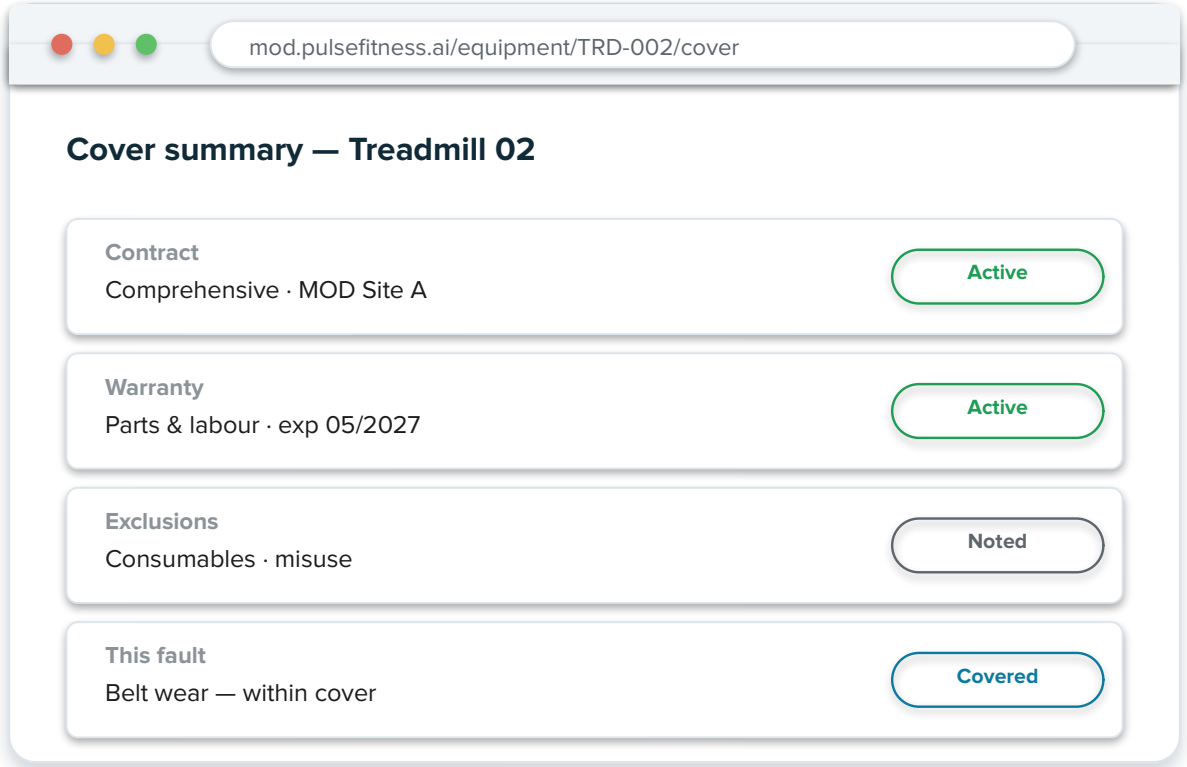

Every request kept against the equipment record.

WARRANTY & COVER VISIBILITY

Know what's covered before work begins

Each equipment record shows warranty, contract cover, exclusions and chargeable review status.

- **Warranty** active cover and expiry dates at a glance
- **Contract cover** the agreement in place for each site and item
- **Exclusions** what falls outside cover, clearly shown
- **Chargeable review** transparent, evidenced billing decisions

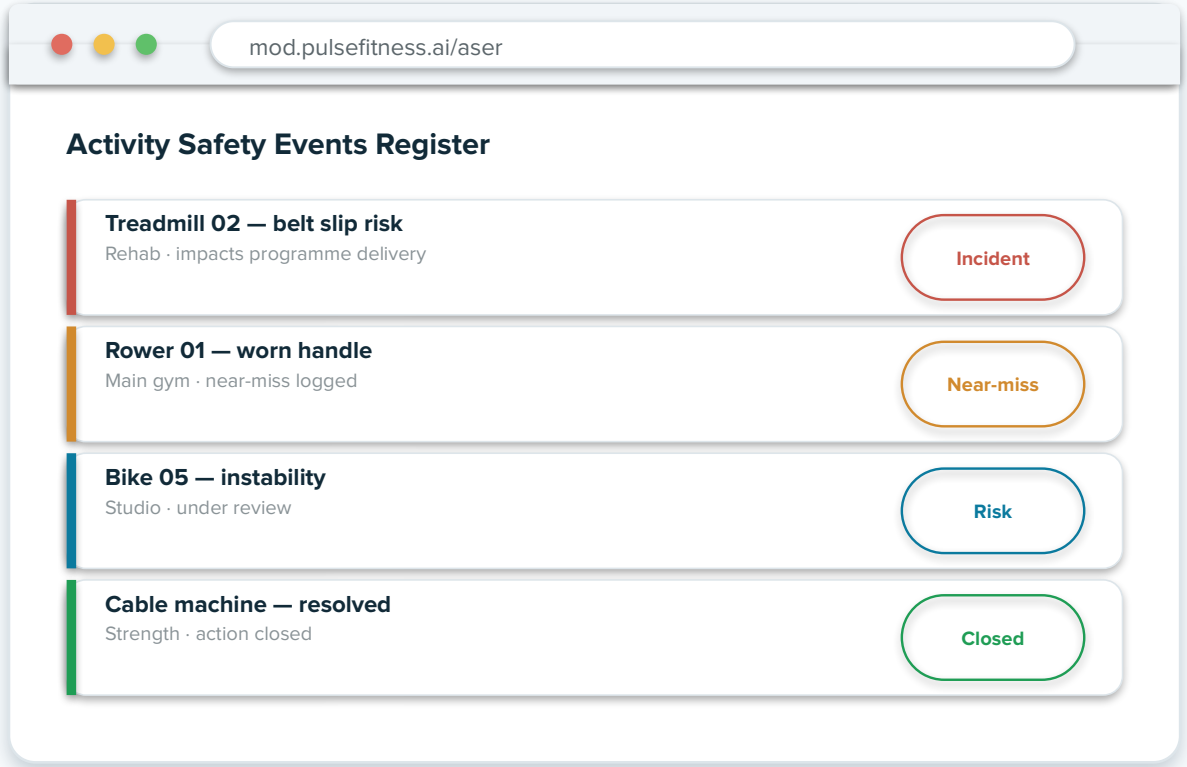

ASER

Activity Safety Events Register

A dedicated, MOD-only register for PTE risks, incidents and near-misses that affect the delivery of training and rehabilitation.

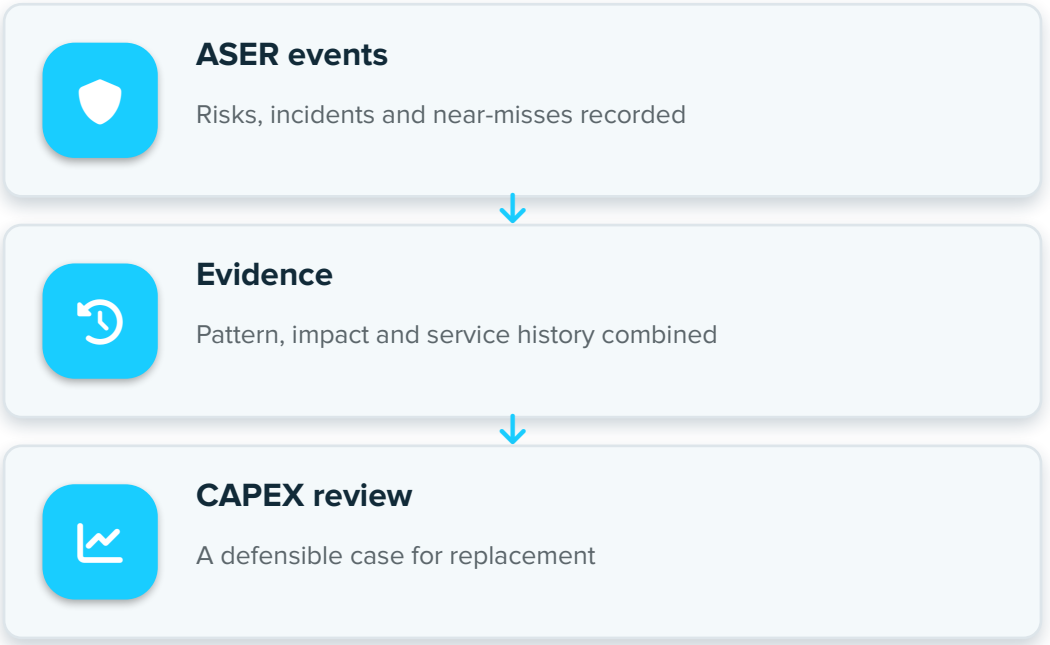

- **PTE risks & incidents** recorded against equipment and site
- **Near-misses** captured before they become incidents
- **Delivery impact** on rehab, group and individual programmes
- **Clinical & activity output** the effect on training outcomes noted
- **MOD-only** a register built specifically for defence use

When equipment repeatedly affects delivery

ASER builds a clear, defensible record where old or unreliable PTE keeps disrupting rehabilitation and training.

- **Pattern of events** repeated risks and incidents on the same item
- **Impact on rehab** evidence of disruption to programme delivery
- **Linked to the asset** events tied to equipment, age and service
- **Supports CAPEX review** a basis for repair-or-replace decisions

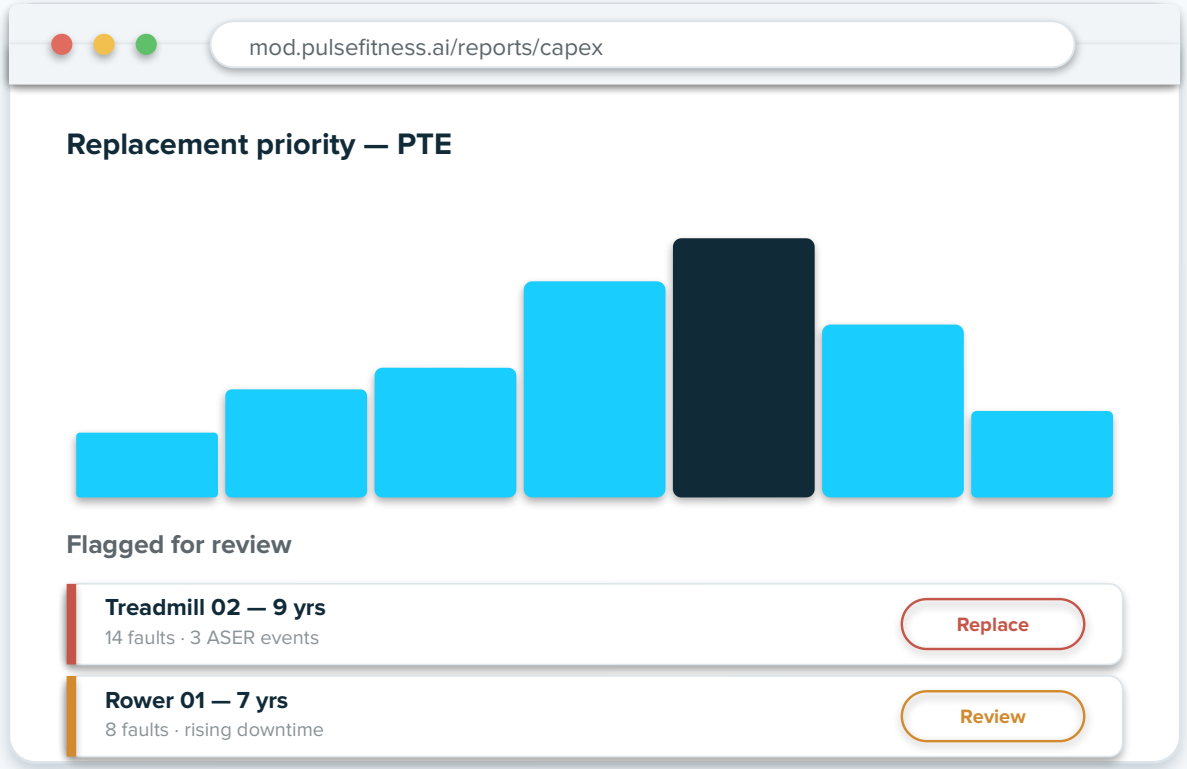

CAPEX REPORTING

A clear case for equipment replacement

Replacement reporting drawing on age, faults, downtime, service history, ASER evidence and condition.

- **Age & condition** identify PTE nearing end of life
- **Faults & downtime** quantify unreliability and lost availability
- **Service history** the full maintenance picture per item
- **ASER evidence** safety and delivery impact factored in
- **Replacement case** a defensible basis for investment

SERVICE HISTORY REPORTS

The full record, on demand

Authorised users can access historical service records and downtime evidence whenever needed.

Service records

Every visit and outcome per item of PTE.

Job status

Open, in-progress and completed work.

Repeat faults

Recurring issues surfaced clearly.

Parts used

Components fitted, recorded against the asset.

Downtime evidence

Time out of service, quantified.

Exportable

Reports available to share and retain.

COMPLIANCE & SAFETY REPORTS

Evidence that stands up to scrutiny

Capture safety and compliance records with a complete, time-stamped trail.

Accident reports

Incidents recorded with the detail required.

RIDDOR reports

Support reportable incident requirements.

Risk assessments

Documented and stored against sites and tasks.

Check sheets

Routine safety checks recorded and reviewable.

Audit trail

Every entry and change logged and traceable.

Evidence storage

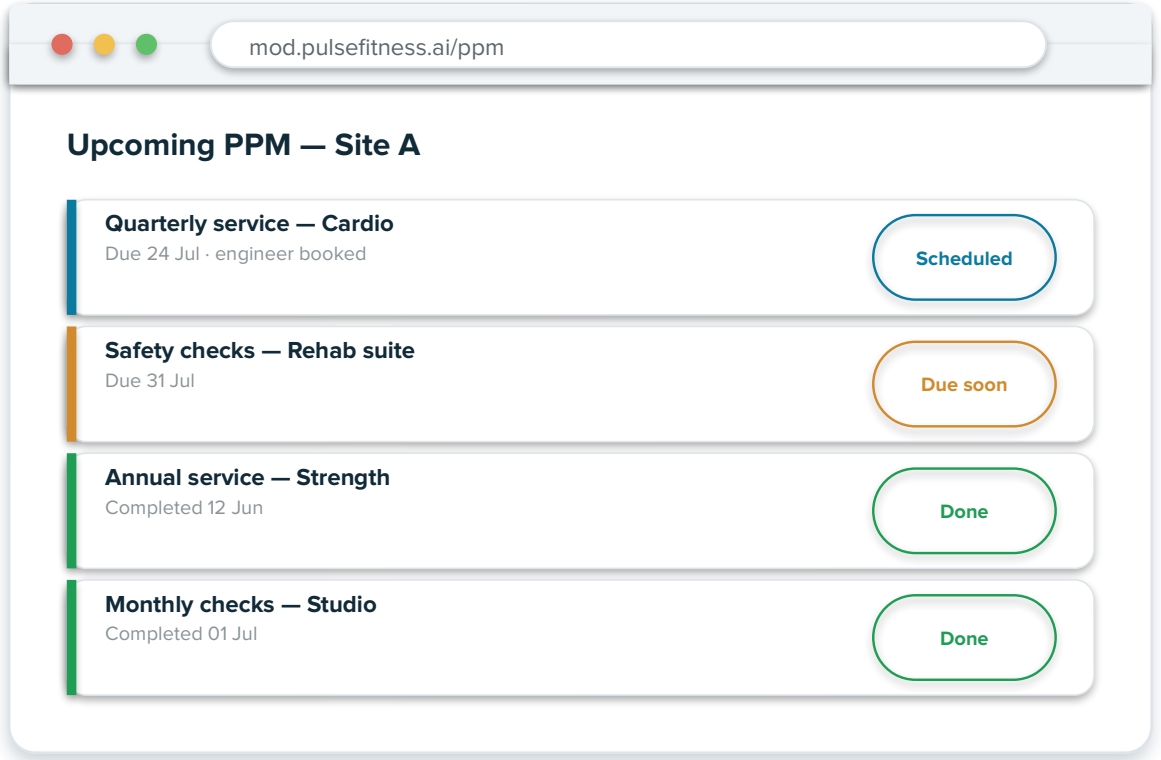

Records kept together and retrievable.

PLANNED MAINTENANCE

Keep PTE safe and available

Preventative maintenance schedules, site visits and service records — planned, tracked and evidenced.

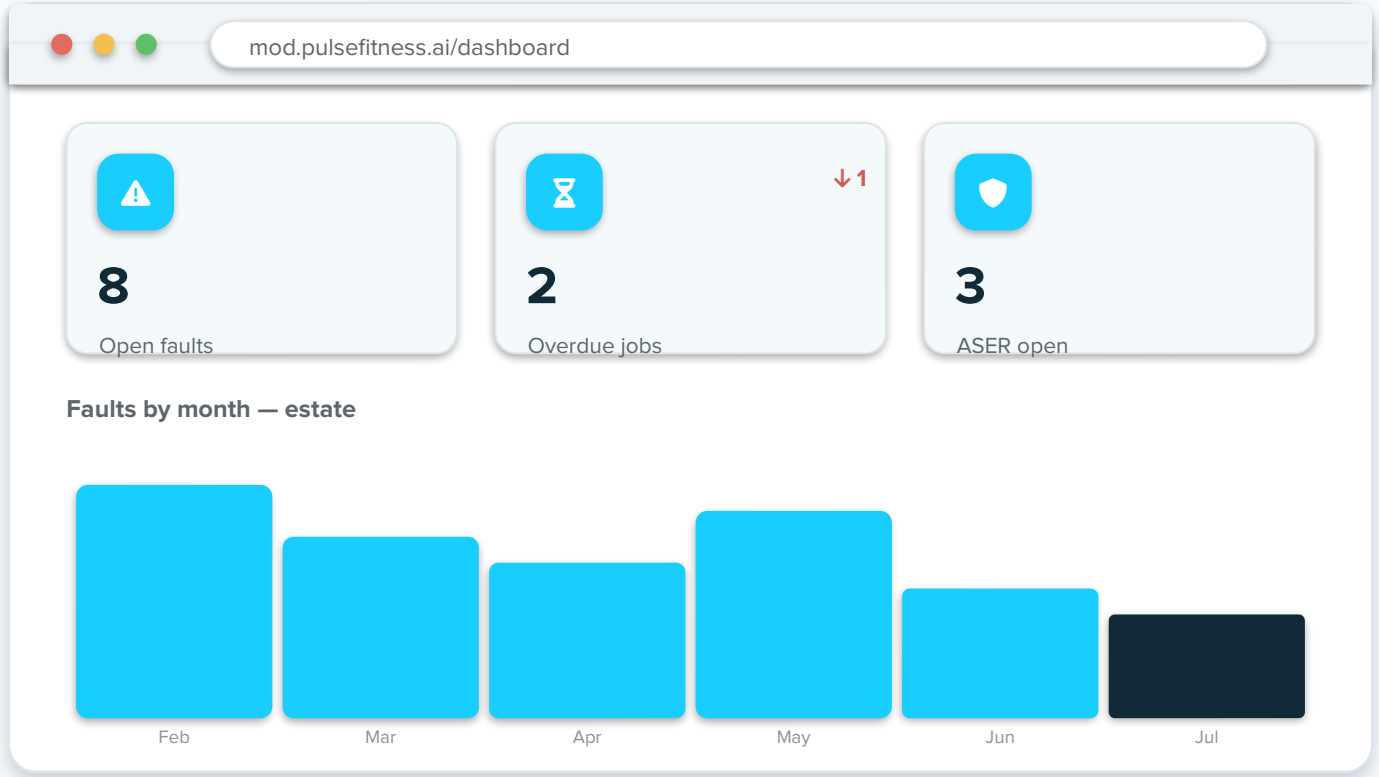

- **PPM schedules** planned maintenance across every item of PTE
- **Site visits** coordinated attendance for scheduled work
- **Engineer reports** each visit documented and stored
- **Service records** a continuous, auditable maintenance history

DASHBOARDS & VISIBILITY

Site and multi-site oversight

Clear dashboards for open faults, overdue jobs, repeat issues, equipment status and safety concerns.

- **Open faults**
- **Overdue jobs**
- **Repeat issues**
- **Equipment status**
- **Safety concerns**

SECURE PERMISSIONS

The right access for every role

Role-based access keeps information in the right hands across sites, service teams and administration.

MOD site users

Their permitted site(s) only — equipment, faults and reports.

Multi-site managers

Oversight across the sites they are authorised for.

Pulse service desk & engineers

Access to assigned jobs and service records.

Administrators

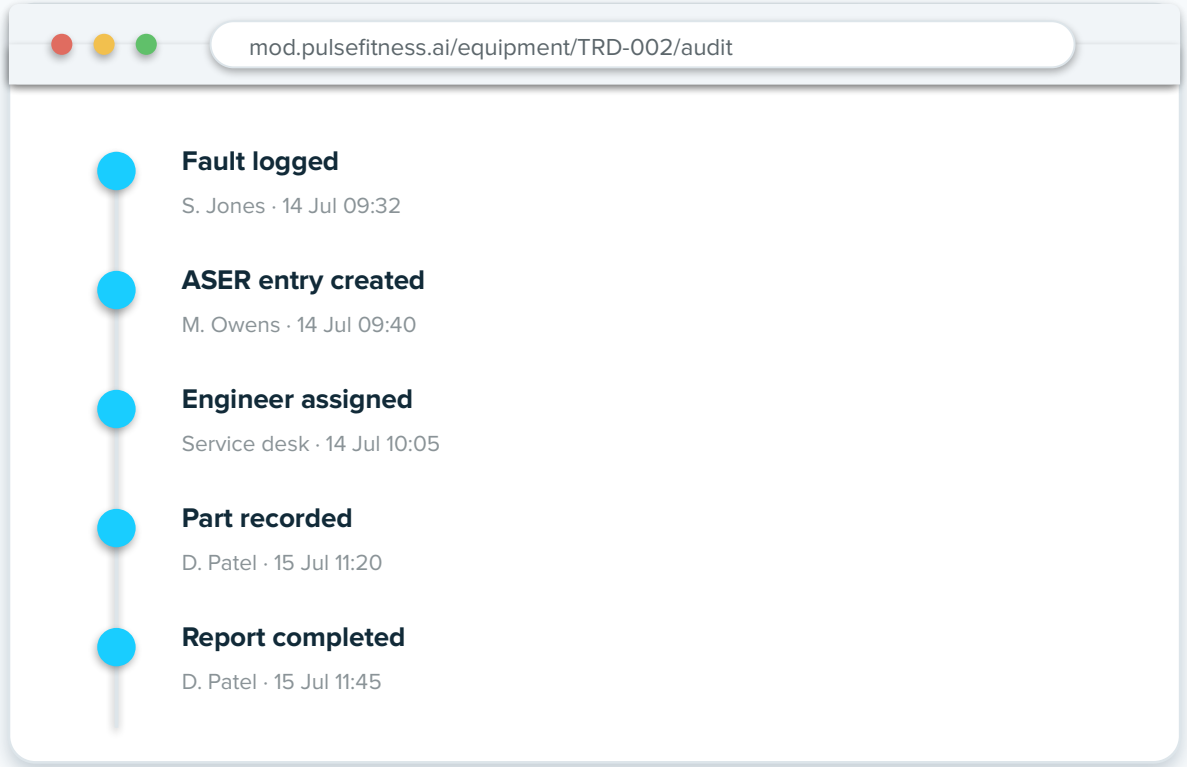

Manage users, permissions and configuration.

AUDIT TRAIL

Every action recorded and traceable

Faults, ASER entries, reports, status changes, document uploads and service updates are all logged.

- **Complete** every material action is captured
- **Attributed** who did what, and when, is recorded
- **Immutable** the record cannot be quietly changed
- **Retrievable** history available for review and assurance

BENEFITS FOR MOD

Clearer, safer, more accountable

The portal supports equipment uptime, safety and rehabilitation continuity — with the evidence to back it up.

Better visibility

One clear view of equipment, faults and safety.

Faster fault reporting

Issues raised and actioned without delay.

Stronger service evidence

A complete, auditable service record.

Safer PTE management

Safety events captured and acted upon.

Rehabilitation continuity

Less disruption to training and rehab.

Clearer replacement case

Defensible justification for investment.

TENDER SUMMARY

A structured, auditable MOD-focused portal

Pulsefitness.ai supports equipment uptime, safety, service delivery and long-term asset planning.

Secure & permission-controlled

Site-scoped access with role-based permissions and a full audit trail.

Safety-focused

ASER and compliance reporting built around MOD requirements.

Evidence-led planning

Service history and ASER combined into a defensible replacement case.

pulsefitness

Pulsefitness.ai MOD Service Portal

Built to support safer, clearer and more accountable PTE management.

We would welcome the opportunity to demonstrate the portal against your sites, equipment and service requirements.
